ICSE 2025 EXAMINATION

Sample Question Paper - 2

Mathematics

Time Allowed: 2 hours and 30 minutes

General Instructions:

1.

- Answers to this Paper must be written on the paper provided separately.
- You will not be allowed to write during the first 15 minutes.
- This time is to be spent reading the question paper.
- The time given at the head of this Paper is the time allowed for writing the answers.
- Attempt all questions from Section A and any four questions from Section B.
- All work, including rough work, must be clearly shown and must be done on the same sheet as the rest of the answers.
- Omission of essential work will result in a loss of marks.
- The intended marks for questions or parts of questions are given in brackets []
- Mathematical tables are provided.

Section A

Quest	ion 1 Choose the corre	ct answers to the questions from the given options:	[15]
(a)	If the cost of an article is ₹ 25,000 and CGST paid by the owner is ₹ 2250, the rate of GST is		[1]
	a) 18%	b) 15%	
	c) 9%	d) 10%	
(b)	From a group of Sara coupled with one-fou while 56 birds are sitt	is birds, one-fourth of the number are moving about in lotus plants, one-nin with as well as 7 times the square root of the total number are moving on a ting in the Bakula trees. Then, what is the total number of birds?	1th [1] hill,
	a) 629	b) 675	
	c) 576	d) 567	
(c)	If $x + 1$ is a factor of $3x^3 + kx^2 + 7x + 4$, then the value of k is		[1]
	a) 14	b) 0	
	c) 6	d) -6	
(d)	If $A = \begin{bmatrix} 5 & 5 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 0 \\ 5 \end{bmatrix}$	$egin{array}{c} 0 \ 5 \end{bmatrix}$ and $A^n = egin{bmatrix} 5^{200} & 5^{200} \ 0 & 0 \end{bmatrix}$, then the value of n is	[1]
	a) 100	b) 75	
	c) 25	d) 50	
(e)	If a, b and c are respectively the pth, qth and rth terms of a GP, then the value of		

If a, b and c are respectively the pth, qth and rth terms of a GP, then the value of (e)

Maximum Marks: 80

 $(q - r) \log a + (r - p) \log P + (p - g) \log c$ is

a) log abc	b) log bo
c) log ab	d) 0

(f) A point M is reflected in X-axis to M'(4, -5). M" is the image of M, when reflected in the Y-axis. The [1] coordinates of M" when M" is reflected in the origin, is

a) (-4, -5)	b) (-4, 5)
c) (4, 5)	d) (4, -5)

(g)

Diagonal AC of a rectangle ABCD is produced to the point E such that AC : CE = 2 : 1, AB = 8 cm [1] and BC = 6 m. The length of DE is

a) $3\sqrt{17}$ cm	b) 15 cm
c) 13 cm	d) $2\sqrt{19}$ cm

(h)

A hollow cone of radius 6 cm and height 8 cm is vertical standing at the origin, such that the vertex of [1] the cone is at the origin. Some pipes are hanging around the circular base of the cone, such that they touch the surface of the graph paper. Then, the total surface area of the formed by the figure will be

[1]

[1]

a) 494.68 cm² b) 484.98 cm²

c)
$$_{489.84}$$
 cm² d) $_{948.84}$ cm²

(i) Find the range of values of x which satisfy the inequation, $(x + 1)^2 - (x - 1)^2 < 6$.

a)
$$\left(-\infty, \frac{3}{2}\right)$$

b) $\left(\frac{3}{2}, \infty\right)$
c) $\left(-\infty, -\frac{3}{2}\right)$
d) $\left(-\infty, -\frac{3}{2}\right) \cup \left(\frac{3}{2}, \infty\right)$

(j) The probability that the minute hand lies from 5 to 15 min in the wall clock, is

(k) If
$$\begin{bmatrix} a^{x} \\ a^{-x} \end{bmatrix} \begin{bmatrix} 1 & 2 \end{bmatrix} = \begin{bmatrix} p & a^{-2} \\ q & \log_{2} 2 \end{bmatrix}$$
, $a > 0$, then a^{p-q} is equal to
(a) $4^{\frac{3}{2}}$
(b) 1
(c) $2^{\frac{-3}{2}}$
(b) 1
(c) $2^{\frac{-3}{2}}$
(c)

(l)

、1

Suppose PQ be a pole, whose coordinates are P(1, 3) and O(3, 3) and A be the position of a man [1] whose coordinates are (1, 1).

i. If a pole makes an angle of elevation to the point A, then the angle θ is

ii. Also, if we shift the origin at (1, 1), then the angle θ is

a) 75, 45°	b) 45°, 60°
c) 45°, 90	d) 45°, 45°

If P, Q, S and R are points on the circumference of a circle of radius r, such that PQR is an equilateral (m) [1] triangle and PS is a diameter of the circle. Then, the perimeter of the quadrilateral PQSR will be

a)
$$2(\sqrt{3} + 1)r$$
 b) $2\sqrt{3} + r$

		c) 2r	d) $2\sqrt{3}r$	
	(n)	If the ratio of mode and median of a certain data	is 6 : 5, then the ratio of its mean and median is	[1]
		a) 10 : 9	b) 9 : 10	
		c) 10 : 8	d) 8 : 10	
	(0)	Assertion (A): $a_n - a_{n-1}$ is not independent of n	then the given sequence is an AP.	[1]
		Reason (R): Common difference $d = a_n - a_{n-1}$ i	s constant or independent of n.	
		a) Both A and R are true and R is the correct explanation of A.	b) Both A and R are true but R is not the correct explanation of A.	
		c) A is true but R is false.	d) A is false but R is true.	
2.	Questio	n 2		[12]
	(a)	Mr. Gupta opened a recurring deposit account in At the time of maturity, he got ₹67,500. Find:i. the total interest earned by Mr. Gupta	a bank. He deposited ₹ 2,500 per month for 2 years.	[4]
		ii. the rate of interest per annum.		
	(b)	Find the third proportional to		[4]
		i. 16 and 36		
		ii. $(x^2 + y^2 + xy)^2$ and $(x^3 - y^3)$		
	(c)	Prove that: $\frac{(1+\cot\theta+\tan\theta)(\sin\theta-\cos\theta)}{\sec^3\theta-\csc^3\theta} = \sin^2\theta\cos^2\theta$	$^{2} \theta$	[4]
3.	Questio	n 3		[13]
	(a) The internal and external diameters of a hollow hemispherical vessel are 7cm and 14 cm, respectively			[4]
		The cost of silver plating of 1 sq cm surface is \mathbf{R}	0.60. Find the total cost of silver plating the vessel all	
	ക	over.	V avis as shown in the given figure	[4]
	(0)	The side AB of a square ABCD is parallel to the $X' \leftarrow P = P = P = P$ $X' \leftarrow P = P = P = P = P = P = P = P = P = P$	Y-axis as shown in the given righte.	[4]
		III. USE graph paper to approximation this question:]	[5]
	(C)	i. The point P(2, - 4) is reflected about the lineii. Point Q is reflected about the line y = 0 to geiii. Name the figure PQR.	x = 0 to get the image Q. Find the coordinates of Q. t the image R. Find the coordinates of R.	נסן

iv. Find the area of figure PQR.

I

I

Section **B**

Attempt any 4 questions

4. Question 4

(a) A shopkeeper bought an article with market price ₹1200 from the wholesaler at a discount of 10%. [3] The shopkeeper sells this article to the customer on the market price printed on it. If the rate of GST is 6%, then find:

i. GST paid by the wholesaler.

ii. Amount paid by the customer to buy the item.

- (b) The sum of the squares of two consecutive odd positive integers is 290. Find them.
- (c) Draw a Histogram for the given data, using a graph paper:

Weekly Wages (in ₹)	No. of People
3000-4000	4
4000-5000	9
5000-6000	18
6000-7000	6
7000-8000	7
8000-9000	2
9000-10000	4

Estimate the mode from the graph.

5. Question 5

(a)	Evoluate	$4\sin 30^\circ$	$2\cos 60^\circ$] [4	5
	Evaluate,	$\sin 90^{\circ}$	$2\cos0^\circ$	$\lfloor 5$	4]·

(b) O is the circumcentre of the \triangle ABC and D is mid-point of the base BC. Prove that \angle BOD = \angle A. [3]

(c) Use factor theorem to factorise $6x^3 + 17x^2 + 4x - 12$ completely.

6. Question 6

(a) Calculate the ratio in which the line joining A (-4, 2) and B(3, 6) is divided by P(x, 3). Also, find [3]

i. x

ii. length of AP

(b)Prove that:
$$1 - \frac{\cos^2 \theta}{1 + \sin \theta} = \sin \theta$$
[3](c)Sum of the first n terms of an AP is $5n^2 - 3n$. Find the AP and also find its 16th term.[4]

7. Question 7

- (a) A grassy land is in the shape of a right triangle. The hypotenuse of the land is 1 m more than twice the [5] shortest side. If the third side is 7 m more than the shortest side, find the sides of the grassy land.
- (b) The marks obtained by 100 students in a Mathematics test are given below

Marks	Number of students
0-10	3
10-20	7
20-30	12

[10]

[3]

[4]

[10] [3]

[4]

[10]

[10]

[5]

30-40	17
40-50	23
50-60	14
60-70	9
70-80	6
80-90	5
90-100	4

Draw an ogive for the given distribution on a graph sheet, (use a scale of 2 cm = 10 units on both axes). Use the ogive to estimate the

i. median.

ii. lower quartile.

iii. number of students who obtained more than 85% marks in the test.

iv. number of students who did not pass in the test, if the pass percentage was 35.

8. **Question 8**

- (a) A number is selected at random from first 50 natural numbers. Find the probability that it is a multiple [3] of 3 and 4.
- How many solid spheres of diameter 6 cm are required to be melted to form a cylindrical solid of (b) [3] height 45 cm and diameter 4 cm?
- In the given figure, AC = AE. (c)

Show that

i. CP = EP

ii. BP = DP

9. **Question 9**

(a)	Solve the following inequation and represent the solution set on the number line.	
	$rac{3x}{5}$ + 2 < x + 4 $\leq rac{x}{2}$ + 5, x \in R	
(b)	Mode and mean of a data are 12k and 15k respectively. Find the median of the data.	[3]

- (b) Mode and mean of a data are 12k and 15k respectively. Find the median of the data.
- In the given figure, if DE || BC, find the ratio of ar (\triangle ADE) and ar (DECB). (c)

Question 10 10.

> Find the fourth proportional to $(a^3 + 8)$, $(a^4 - 2a^3 + 4a^2)$ and $(a^2 - 4)$. [3] (a)

[10]

[4]

[10]

[4]

[10]

(b) Use a ruler and a pair of compasses to construct a $\triangle ABC$, in which BC = 4.2 cm, $\angle ABC = 60^{\circ}$ and [3] AB = 5 cm. Construct a circle of radius 2 cm to touch both the arms of $\angle ABC$ of $\angle ABC$.

[4]

(c) A man observes the angle of elevation of the top of a building to 30°. He walks towards it in a horizontal line though its base. On covering 60 m, the angle of elevation changes to 60°. Find the height of the building correct to the nearest metre.

Solution

Section A

1. Question 1 Choose the correct answers to the questions from the given options:

(i) **(a)** 18%

Explanation: { C.P. = ₹ 25,000, CGST = ₹ 2250 ∴ GST = 2 × ₹ 2250 = ₹ 4500 let rate of GST = r% ∴ r% of ₹ 25,000 = ₹ 4500 \Rightarrow r = (4500 × 100) ÷ 25000 = 18%

(ii) **(c)** 576

Explanation: {

Let the total number of Saras birds be x.

Then, number of Saras birds moving in lotus plants = $\frac{x}{4}$ Number of Saras birds moving on a hill = $\frac{x}{9} + \frac{x}{4} + 7\sqrt{x}$ Number of Saras birds sitting on the Bakula trees = 56 According to the question,

$$\frac{x}{4} + \frac{x}{9} + \frac{x}{4} + 7\sqrt{x} + 56 = x$$

$$\Rightarrow 7\sqrt{x} = x - \frac{x}{4} - \frac{x}{9} - \frac{x}{4} - 56$$

$$\Rightarrow 7\sqrt{x} = \frac{36x - 9x - 4x - 9x}{36} = 56$$

$$\Rightarrow 7\sqrt{x} = \frac{7x}{18} - 56 \Rightarrow \sqrt{x} = \frac{x}{18} - 8$$

$$\Rightarrow x = \frac{x^2}{324} + 64 - \frac{8x}{9} \text{ [squaring on both sides]}$$

$$\Rightarrow x = \frac{x^2 + 20736 - 288x}{324}$$

$$\Rightarrow 324x = x^2 + 20736 - 288x$$

$$\Rightarrow x^2 - 612x + 20736 = 0$$

$$\Rightarrow x^2 - 36x - 576x + 20736 = 0 \text{ [splitting the middle term]}$$

$$\Rightarrow x(x - 36) - 576(x - 36) = 0$$

$$\Rightarrow x - 36 = 0 \text{ or } x - 576 = 0$$

$$\Rightarrow x = 576 \text{ or } x = 36$$

Here, x = 36 is not possible, because if there are only 36 birds, then 56 cannot be on the trees. Thus, total number of Saras birds is 576.

(iii) (c) 6

Explanation: {

Let $f(x) = 3x^3 + kx^2 + 7x + 4$ As x + 1 is a factor of f(x), f(-1) = 0 $\Rightarrow 3(-1)^3 + k(-1)^2 + 7(-1) + 4 = 0$ $\Rightarrow -3 + k - 7 + 4 = 0$ $\Rightarrow k = 6$

(iv) (a) 100

Explanation: {

We have,
$$A = \begin{bmatrix} 5 & 5 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 0 & 0 \\ 5 & 5 \end{bmatrix} = \begin{bmatrix} 25 & 25 \\ 0 & 0 \end{bmatrix} = \begin{bmatrix} 5^2 & 5^2 \\ 0 & 0 \end{bmatrix}$$

$$\therefore A^2 = A \cdot A = \begin{bmatrix} 5^2 & 5^2 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 5^2 & 5^2 \\ 0 & 0 \end{bmatrix}$$
$$= \begin{bmatrix} 5^4 & 5^4 \\ 0 & 0 \end{bmatrix}$$

$$A^{n} = \begin{bmatrix} 5^{2n} & 5^{2n} \\ 0 & 0 \end{bmatrix}$$

Thus,
$$\begin{bmatrix} 5^{2n} & 5^{2n} \\ 0 & 0 \end{bmatrix} = \begin{bmatrix} 5^{200} & 5^{200} \\ 0 & 0 \end{bmatrix}$$
$$\Rightarrow 5^{2n} = 5^{200}$$
$$\Rightarrow 2n = 200$$
$$\Rightarrow n = 100$$

(v) (d) 0

Explanation: {

Let A be the first term and R be the common ratio of the given GP.

Then, a = pth term \Rightarrow a = AR^{P - 1} \Rightarrow log a = log A + (p - 1) log R ...(i) b = qth term \Rightarrow b = AR^{q-1} \Rightarrow log b = log A + (q - 1) log R ...(ii) c = rth term \Rightarrow c = AR^{r-1} \Rightarrow log c = log A + (r - 1) log R ...(iii) \Rightarrow Now, consider {q - r} log a + (r - p)log b + (p - q)log c =(q - r){log A + (p - 1)log R} + (r - p){log A + (q - 1)log R} [from Eqs. (i), (ii) and (iii)] = log A{(q - r)+ (r - p) + (p - q)} + log R{(p - 1) (q - r) + (q - 1)(r - p) + (r - 1)(p - q)} = (log A) 0 + {p(q - r) + q (r - p)+ r(p - q) - (q - r) - (r - p) - (p - q)} log R| = (log A)0 + (log R) 0 = 0

(vi) **(d)** (4, -5)

Explanation: {

Since, the image of any point (x, y) under X-axis is (x, - y).

 \therefore Coordinate of M \equiv (4, 5)

Since, the image of any point (x, y) under Y-axis is (-x, y).

 \therefore Coordinate of M'' \equiv (4, -5)

Since, the image of any point (x, y) under origin is (-x, -y).

 \therefore Coordinate of M^{III} = (4, - 5)

(vii) **(a)** $3\sqrt{17}$ cm

Explanation: {

Given AB = 8 cm and BC = 6 cm

 $AC = \sqrt{8} + 0 = 10 \text{ cm}$

Also, given AC :
$$CE = 2 : 1$$

Now, produce BC to meet DE at the point P as CP is parallel to AD,

$$\triangle ECP \sim \triangle EAD \dots(i)$$

$$\Rightarrow \frac{CP}{AD} = \frac{CE}{AE} \Rightarrow \frac{CP}{6} = \frac{1}{3} \dots(ii)$$

$$\Rightarrow CP = 2 \text{ cm}$$

Also, $\triangle CPD$ is right triangle.

$$\therefore DP = \sqrt{CD^2 + CP^2}$$

$$= \sqrt{68} = 2\sqrt{17} \text{ cm}$$

But $DP = PE = 2 : 1 \text{ [from Eq.(i)]}$

$$\therefore PE = \sqrt{17} \text{ cm}$$

Thus, $DE = DP + PE = 2\sqrt{17} + \sqrt{17} = 3\sqrt{17} \text{ cm}$

(viii) (c) 489.84 cm²

Explanation: {

According to the given information, a shape of figure is shown below

When the hanging pipes touches the surface paper, a circular shape ABCD is formed on the graph paper. The size of circle ABCD is equal to the size of circular base of the cone.

. Radius of the circle ABCD is 6 cm.

Hence, the coordinates of A, B, C and Dare (6, 0), (0, 6), (-6, 0) and (0, -6), respectively.

The figure formed in the given information is cylindrical in outer surface and conical in the inner surface. Now, total surface area of the figure

= Curved surface area of the cylinder + Curved surface area of the cone

$$= 2\pi rh + \pi rl = \pi r (2h + l)$$

= $\pi r(2h + \sqrt{r^2 + h^2})$
= $3.14 \times 6(2 \times 8 + \sqrt{6^2 + 8^2})$
= $18.84(16 + \sqrt{36 + 64})$
= $18.84(16 + \sqrt{100}) = 18.84(16 + 10)$
= $18.84 \times 26 = 489.84 \text{ cm}^2$

(ix) (a)
$$(-\infty, \frac{3}{2})$$

Explanation: {

We have,
$$(x + 1)^2 - (x - 1)^2 < 6$$

 $\Rightarrow (x^2 + 1 + 2x) - (x^2 + 1 - 2x) < 6 [:: (a \pm b)^2 = a^2 + b^2 \pm 2ab]$
 $\Rightarrow 4x < 6$
 $\Rightarrow x < \frac{6}{4}$
 $\Rightarrow x < \frac{3}{2}$
 $\Rightarrow x \in (-\infty, \frac{3}{2})$

(x) (a) $\frac{1}{6}$

Explanation: {

In a wall clock, the minute hand cover the 60 min in on complete round.

 \therefore Total number of possible outcomes = 60

The minute hand cover the time from 5 to 15 min,

Number of outcomes favourable to E

= Distance from 5 to $15 \min = 10$

 \therefore Required probability = $\frac{10}{60} = \frac{1}{6}$

(xi) (c)
$$2^{\frac{-3}{2}}$$

Explanation: {

We have,
$$\begin{bmatrix} a^x \\ a^{-x} \end{bmatrix} \begin{bmatrix} 1 & 2 \end{bmatrix} = \begin{bmatrix} p & a^{-2} \\ q & \log_2 2 \end{bmatrix}$$

$$\Rightarrow \begin{bmatrix} a^x & 2a^x \\ a^{-x} & 2a^{-x} \end{bmatrix} = \begin{bmatrix} p & a^{-2} \\ q & 1 \end{bmatrix} \begin{bmatrix} \because \log_2 2 = \frac{\log 2}{\log 2} = 1 \end{bmatrix}$$

On comparing the corresponding elements both sides, we get

$$\Rightarrow a^{x} = p \dots(i)$$

$$\Rightarrow 2a^{x} = a^{-2} \dots(ii)$$

$$\Rightarrow a^{-x} = q \dots(iii)$$

and $2a^{-x} = 1 \dots(iv)$
On multiplying Eqs. (ii) and (iv), we get
 $4a^{x-x} = a^{-2}$

$$\Rightarrow 4a^{0} = a^{-2} \Rightarrow 4 = a^{-2} \Rightarrow 4 = \frac{1}{a^{2}}$$

$$\Rightarrow a^{2} = \frac{1}{4} \Rightarrow a = \frac{1}{2} [\because a > 0]$$

Now, $a^{p-q} = a^{a^{x} - a^{-x}}$ [from Eqs. (i) and (iii)]

$$= a^{\frac{1}{2}a^{-2} - \frac{1}{2}} = a^{2 - \frac{1}{2}}$$
 [from Eqs. (ii) and (iv)]

$$= a^{\frac{1}{2} \cdot 4 - \frac{1}{2}} [\because a^{-2} = 4]$$

$$= (\frac{1}{2})^{\frac{3}{2}} = 2^{\frac{-3}{2}}$$

(xii) **(d)** 45°, 45°

Explanation: {

Given, coordinates of pole be P(1, 3) and Q (3, 3) and A(1, 1) be the position of man

$$\tan \theta = \frac{PQ}{AP} \Rightarrow \tan \theta = \frac{2}{2} = 1$$

 $\Rightarrow \theta = 45^{\circ}$ [:: tan $45^{\circ} = 1$]

ii. When we shift the origin at (1, 1), then the angle will remain same, i.e. θ = 45°.

(xiii) (a) $2(\sqrt{3} + 1)r$

Explanation: {

As PQR is an equilateral triangle, hence PS will be perpendicular to QP and will divide it into 2 equal parts. Since, $\angle P$ and $\angle S$ will be supplementary, so

 $\angle S = 120^{\circ}$ and $\angle QSA = \angle RSA = 60^{\circ}$

Now, PA = PQ cos 30° and OA = OQ sin 30° = $\frac{r}{2}$

Hence, PQ = $\frac{PA}{\cos 30^\circ} = \frac{r + \frac{r}{2}}{\frac{\sqrt{3}}{2}} = \sqrt{3}r$ In \triangle QAS, AS = QS $\cos 60^\circ \Rightarrow$ QS $= \frac{\frac{r}{2}}{\frac{1}{2}} = r$

Since, AQ = AR, AS is common and $\angle QAS = \angle RAS = 90^{\circ}$ So, QS = RS. \therefore Perimeter of PQSP = 2(PQ + QS) = 2($\sqrt{3}$ + 1)r

(xiv) (b) 9:10

Explanation: { We know that,

Mode = 3 Median - 2 Mean

On dividing both sides by median, we get

$$\frac{\text{Mode}}{\text{Median}} = 3 - 2 \frac{\text{Mean}}{\text{Median}}$$

$$\Rightarrow \frac{6}{5} = 3 - 2 \frac{\text{Mean}}{\text{Median}} [\because \frac{\text{mode}}{\text{median}} = \frac{6}{5}, \text{ given}]$$

$$\Rightarrow \frac{6}{5} - 3 = -2 \frac{\text{Mean}}{\text{Median}}$$

$$\Rightarrow \frac{6-15}{5} = -2 \frac{\text{Mean}}{\text{Median}}$$

$$\Rightarrow \frac{-9}{5} = -2 \frac{\text{Mean}}{\text{Median}}$$

$$\Rightarrow \frac{\text{Mean}}{\text{Median}} = \frac{9}{10}$$

(xv) (d) A is false but R is true.

Explanation: {

We have, common difference of an AP

 $d = a_n - a_{n-1}$ is independent of n or constant.

So, A is false but R is true.

2. Question 2

i. P = ₹ 2,500 (i) n = 24 months r = ? M.V. = ₹ 67,500 Total money deposited in 2 years $= P \times n$ $= 2,500 \times 24$ = 60,000 Total interest earned by Mr. Gupta = Maturity value - Money deposited = 67,500 - 60,000 =₹7,500 ii. M.V. = P × n + $\frac{P \times n(n+1) \times r}{2400}$ $67,500 = 2500 \times 24 + \frac{2500 \times 24 \times 25 \times r}{2400}$ 67,500 = 60,000 + 625r67,500 - 60,000 = 625r7,500 = 625r $\frac{7500}{10} = r$ 625r = 12% p.a. (ii) i. 16 and 36 Let the thid proportional to 16 and 36 be x. \Rightarrow 16, 36 and x ins continous proportion. $\Rightarrow 16: 36 = 36: x$ $\Rightarrow 16 \times x = 36 \times 36$

$$\Rightarrow x = \frac{36 \times 36}{16}$$

$$\Rightarrow x = 81$$
ii. $(x^2 + y^2 + xy)^2$ and $x^3 - y^3$
Let third proportional to $(x^2 + y^2 + xy)^2$ and $x^3 - y^3$ be x.

$$\Rightarrow (x^2 + y^2 + xy)^2, x^3 - y^3 = x^3 - y^3 : x$$

$$x = \frac{(x^3 - y^3)^2}{(x^2 + y^2 + xy)^2}$$
[$\therefore x^3 - y^3 = (x - y)(x^2 + y^2 + xy)$]
 $x = (x - y)^2$
(iii)L.H.S. = $\frac{(1 + \cot \theta + \tan \theta)(\sin \theta - \cos \theta)}{\sec^3 \theta - \csc^3 \theta}$
 $= \frac{(1 + \frac{\cos \theta}{\sin \theta} + \frac{\sin \theta}{\cos \theta})(\sin \theta - \cos \theta)}{\frac{1}{\sin^3 \theta} - \frac{1}{\sin^3 \theta}}$
 $\{\sin^2 \theta + \cos^2 \theta = 1\}$
 $= \frac{(\sin \theta \cos \theta + 1)(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}{(\sin^3 - \cos^3 \theta)\sin^3 \theta \cos^3 \theta}$
Since, we know,
 $a^3 - b^3 = (a - b)(a^2 + ab + b^2)$
 $= \frac{(\sin \theta \cos \theta + 1)(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}{(\sin \theta - \cos \theta)(\sin^3 \theta \cos \theta + \sin \theta \cos \theta + \sin \theta \cos \theta)(\sin^3 \theta \cos^3 \theta)}$
 $= \frac{(\sin \theta \cos \theta + 1)(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}{(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}$
 $= \frac{(\sin \theta \cos \theta + 1)(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}{(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}$
 $= \frac{(\sin \theta \cos \theta + 1)(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}{(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}$
 $= \frac{(\sin \theta \cos \theta + 1)(\sin \theta - \cos \theta)(\sin^3 \theta \cos^3 \theta)}{(\sin \theta - \cos \theta)(\sin^2 \theta + \cos^2 \theta + \sin \theta \cos \theta (\sin \theta \cos \theta))}$
 $= \frac{(\sin \theta \cos \theta + 1)(\sin^2 \theta \cos^2 \theta)}{(1 + \sin \theta \cos \theta)}$ { $\therefore \sin^2 \theta + \cos^2 \theta = 1$ }
 $= \sin^2 \theta \cos^2 \theta = \text{RHS proved}$

$$= \sin^2\theta \cos^2\theta = \text{RHS prove}$$

3. Question 3

(i) Given, internal diameter of hollow hemispherical vessel = 7 cm external diameter of a hollow hemispherical vessel = 14 cm

$$r_{1} = \frac{1}{2} \text{ cm}$$

$$r_{2} = \frac{14}{2} = 7 \text{ cm}$$
Area of Ring = $\pi r_{2}^{2} - \pi r_{1}^{2}$
Total area to be painted

$$= 2\pi r_{2}^{2} + 2\pi r_{1}^{2} + (\pi r_{2}^{2} - \pi r_{1}^{2})$$

$$= 3\pi r_{2}^{2} + \pi r_{1}^{2}$$

$$= \pi (3\pi r_{2}^{2} + r_{1}^{2})$$

$$= \pi [3 \times 49 + (3.5)^{2}] = 3.14 \times (147 + 12.25)$$

 $= 500.045 \text{ cm}^2$

Hence, the total cost of silver painting the vessel = 500.045 \times 0.6

= ₹ 300.027

(ii) i. The slope of AD

We know that the slope of any line parallel to x-axis is 0.

 \therefore The slope of AD = 0

ii. The slope of BD. As ABCD in a square \therefore the diagonal BD makes an angle of 45° with +ve direction of x-axis

 \therefore Slope of BD = tan 45^o = 1

iii. The diagonal AC make augle of 135^o with positive direction of x-axis.

 \therefore Slope of AC = tan 135^o $= \tan (90 \times 2 - 45)$ = tan (-45) = -tan 45 = -1 Scale:Let1cm=1unit

$$R(-2, 4) = \begin{bmatrix} 7 & a \log x \text{ and } y \text{-axis} \\ -6 & -5 \\ -5 & -4 \\ -3 & -2 \\ -1 & -3 \\ -2 & -1 \\ -2 & -2 \\ -3 & -2 \\ -2 & -3 \\$$

i. The coordinates of Q are (- 2, - 4) ii. The coordinates of R are (-2, 4) iii. PQR is Right angle Triangle iv. Area of $\triangle PQR = \frac{1}{2} \times Base \times height$ $=\frac{1}{2} \times 4 \times 8$ = 2×8 = 16 sq. unit

Section B

4. Question 4

(iii)

(i) i. C.P for the shopkeeper $= 1200 \times \frac{90}{100} = ₹1080$ GST paid by the wholesaler $=1080 \times \frac{60}{100} = ₹64.80$ ii. S.P of the article = ₹1200 GST paid by the customer $= 1200 \times \frac{6}{100} = ₹72$ Amount paid by the customer = S.P. + GST = 1200 + 72 = ₹1272

(ii) Let the two consecutive odd no. be x and x + 2.

0

A/c question

$$x^{2} + (x + 2)^{2} = 290$$

 $\Rightarrow x^{2} + x^{2} + 4x + 4 = 290$
 $\Rightarrow 2x^{2} + 4x - 286 = 0$
 $\Rightarrow 2(x^{2} + 2x - 143) = 0$
 $\Rightarrow x^{2} + 2x - 143 = 0$
 $\Rightarrow x^{2} + 13x - 11x - 143 = 0$
 $\Rightarrow x(x + 13) - 11(x + 13) = 0$
 $x = 11$ or $x = -13$ rejected

6. Question 6

(i) i. By using section formula,

$$A(-4, 2) = P(x, 3) = B(3, 6)$$
Let the ratio be k : 1

$$y = \frac{m_2 y_1 + m_1 y_2}{m_1 + m_2}$$

$$3 = \frac{1 \times 2 + k \times 6}{k+1}$$

$$3k + 3 = 2 + 6k$$

$$3k - 6k = 2 - 3$$

$$-3k = -1$$

$$k = \frac{1}{3}$$
Ratio = 1 : 3

$$x = \frac{m_1 x_2 + m_2 x_1}{m_1 + m_2}$$

$$x = \frac{1 \times 3 + 3 \times -4}{1+3}$$

$$x = \frac{3 - 12}{4}$$

$$x = -\frac{-9}{4}$$

 $x = \frac{-9}{4}$ ii. Here coordinate of P is $\left(\frac{-9}{4}, 3\right)$ Length of, AP = $\sqrt{(y_2 - y_1)^2 + (x_2 - x_1)^2}$ = $\sqrt{(3 - 2)^2 + \left(-\frac{9}{4} - (-4)\right)^2}$ = $\sqrt{(1)^2 + \left(\frac{-9}{4} + 4\right)^2}$ = $\sqrt{(1)^2 + \left(\frac{-9 + 16}{4}\right)^2}$ = $\sqrt{(1)^2 + \left(\frac{7}{4}\right)^2}$ = $\sqrt{(1)^2 + \left(\frac{7}{4}\right)^2}$ = $\sqrt{1 + \frac{49}{16}}$ = $\sqrt{\frac{65}{16}}$ = $\frac{\sqrt{65}}{4}$ (ii) LHS = $\frac{1}{1} - \frac{\cos^2 \theta}{1 + \sin \theta} = \frac{1 + \sin \theta - \cos^2 \theta}{1 + \sin \theta}$ = $\frac{1 + \sin \theta - (1 - \sin^2 \theta)}{1 + \sin \theta}$ = $\frac{1 + \sin \theta - 1 + \sin^2 \theta}{1 + \sin \theta}$ = $\frac{\sin \theta(1 + \sin \theta)}{(1 + \sin \theta)}$ = sin θ = RHS Hence Proved

(iii) $S_n = 5n^2 - 3n$ $S_1 = a_1$ $= 5(1)^2 - 3(1)$ = 5 - 3 = 2 $a_1 = 2$ $S_2 = a_1 + a_2$ $a_1 + a_2 = 5(1)^2 - 3(2)$ = 20 - 6 = 14 $\therefore a_1 + a_2 = 14$ $2 + a_2 = 14$ a₂ = 14 - 2 a₂ = 12 Again, $S_3 = a_1 + a_2 + a_3$ $a_1 + a_2 + a_3 = 5(3)^2 - 3(3)$ = 45 - 9 = 36 $a_1 + a_2 + a_3 = 36$ $14 + a_3 = 36$ $a_3 = 36 - 14$ a₃ = 22 a₁ = 2, a₂ = 12, a₃ = 22 Hence square becomes 2, 12, 22, ... a₁ = a = 2 d = 12 - 2 = 10 $a_{16} = a + (16 - 1)d$ $= 2 + 15 \times 10$ = 2 + 150 $a_{16} = 152$ 7. Question 7 (i) Let the shortest side be x m. hypotenuse = (2x + 1)m3rd side = (x + 7)m(2x + 1) x + 7 х $(2x + 1)^2 = (x + 7)^2 + x^2$ {by Pythagoas theorem} $\Rightarrow 4x^2 + 1 + 4x = x^2 + 49 + 14x + x^2$

 $\Rightarrow 2x^2 - 10x - 48 = 0$ $\Rightarrow x^2 - 5x - 24 = 0$

 $\Rightarrow x^{2} - 8x + 3x - 24 = 0$ $\Rightarrow x(x - 8) + 3(x - 8) = 0$ $\Rightarrow (x + 3) (x - 8) = 0$ x = -3, 8 x = -3 rejected (`.` length can never be -ve) $\therefore x = 8$ hypotenuse i.e. AC = 2x + 1 $= 2 \times 8 + 1 = 17$ BC = x = 8m AB = x + 7 = 8 + 7

AB = 15 m

(ii) The cumulative frequency table for the given continuous distribution is given below

Marks	Number of students	Cumulative frequency (cf)
0-10	3	3
10-20	7	10
20-30	12	22
30-40	17	39
40-50	23	62
50-60	14	76
60-70	9	85
70-80	6	91
80-90	5	96
90-100	4	100

On the graph paper, we plot the following points A (10, 3), B (20, 10), C (30, 22), D (40, 39), E (50, 62), F (60, 76), G (70, 85), H (80, 91), 7(90, 96) and V(100, 100). Join all these points by a free hand drawing. The required ogive is shown on the graph paper given below

Here, number of students (n) = 100, which is even.

i. Let P be the point on Y-axis representing frequency

$$=\frac{n}{2}=\frac{100}{2}=50$$

Through P, draw a horizontal line to meet the ogive at point Q. Through Q, draw a vertical line to meet the X-axis at T. The abscissa of the point T represents 43 marks. Hence, the median marks is 43.

ii. Let R be the point on Y-axis representing frequency $n = \frac{100}{25} - 25$

 $=\frac{n}{4}=\frac{100}{4}=25.$

Through R, draw a horizontal line to meet the ogive at point S. Through S, draw a vertical line to meet the X-axis at N. The abscissa of the point N represents 31 marks. Hence, the lower quartile = 31 marks.

iii. 85% marks = 85% of 100 = 85 marks.

Let the point M on X-axis represents 85 marks. Through M, draw a vertical line to meet the ogive at the point O. Through O draw a horizontal line to meet the Y-axis at point J. The ordinate of point J represents 95 students. \therefore Number of students who obtained more than 85% in the test = 100 - 95 = 5

iv. 35% marks = 35% of 100 = 35

Let the point K on X-axis represents 35 marks. Through K, draw a vertical line to meet the ogive at the point L. Through L, draw a horizontal line to meet the Y-axis at point U. The ordinate of point U represents 30 students on Y-axis. Hence, the number of students, who did not pass in the test is 30.

8. Question 8

(i) n(s) = 50

n(multiple of 3 and 4) = {12, 24, 36, 48} i.e multiple of 12

(multiple of 3 and 4) = $\frac{4}{50} = \frac{2}{25}$

(ii) Given, diameter of solid sphere, $d_1 = 6$ cm

 \therefore Radius of sphere, $r_1 = \frac{6}{2} = 3$ cm

Also, given diameter of cylinder, $d_2 = 4$ cm

 \therefore Radius of cylinder, $r_2 = \frac{4}{2} = 2$ cm

 \therefore Height of cylinder, h = 45 cm [given]

Let the required number of spheres be N.

 \therefore N × Volume of sphere = Volume of cylinder

$$\Rightarrow N \times \frac{4}{3}\pi r_1^3 = \pi r_2^2 h$$

$$\Rightarrow N \times \frac{4}{3}\pi \times (3)^3 = \pi \times (2)^2 \times 45$$

$$\therefore N = \frac{2 \times 2 \times 45}{4 \times 3 \times 3} = 5$$

Hence, the required number of solid spheres is 5.

In $\triangle ADC$ and $\triangle ABE$ $\angle ACD = \angle AEB$ (angle in the same segment BD) AC = AE (given) $\angle A = \angle A$ (common) $\therefore \triangle ADC \cong \triangle ABE$ (ASA Còng rule) $\Rightarrow AB = AD$ (CPCT) But AC = AE $\therefore AC - AB = AE - AD$ $\Rightarrow BC = DE$ In $\triangle BPC$ and $\triangle DPE$ $\angle C = \angle E$ (angle in the same segment) BC = DE $\angle CBP = \angle CDE$ (angle on the same segment) $\therefore \triangle BPC \cong \triangle DPE$ (ASA cong rule) $\Rightarrow BP = DP$ and CP = PE (CPCT)

9. Question 9

(i)
$$\frac{3x}{5} + 2 < x + 4$$
$$\Rightarrow \frac{3x+10}{5} < x + 4$$

 \Rightarrow 3x + 10 < 5(x + 4) \Rightarrow 3x + 10 < 5x + 20 \Rightarrow 10 - 20 < 5x - 3x $\Rightarrow -10 < 2x$ $\Rightarrow -5 < x$ -5 0 1 2 -00 $+\infty$ -6 And $x + 4 \le \frac{x}{2} + 5$ \Rightarrow x + 4 $\leq \frac{x+10}{2}$ $\Rightarrow 2x + 8 \le x + 10$ $\Rightarrow x \leq 2$ -00 2 ∞ 1 ∞ -00 -š 2 Solution Set = {x: - $5 < x \le 2, x \in R$ } (ii) Given: mode = 12 k, mean = 15 k, median = ? Using Empirical relation; Mode = 3 median - 2 mean 12k = 3 median - 2(15 k)3 median = 12k + 30k3 median = 42 kmedian = $\frac{42k}{3}$ median = 14k (iii)Given, DE || BC, DE = 6 cm and BC = 12 cm. In \triangle ABC and \triangle ADE, $\angle ABC = \angle ADE$ [corresponding angles] $\angle ACB = \angle AED$ [corresponding angles] and $\angle A = \angle A$ [common angle] $\therefore \triangle ABC \sim \triangle ADE$ [by AAA similarity criterion] We know that the ratio of areas of two similar triangles is equal to the ratio of squares of their corresponding sides. $= \frac{(DE)^2}{(BC)^2} = \frac{(6)^2}{(12)^2} = \left(\frac{1}{2}\right)^2$ $\operatorname{ar}(\Delta ADE)$ $\therefore \frac{\operatorname{ar}(\bigtriangleup ABC)}{\operatorname{ar}(\bigtriangleup ABC)}$ $\Rightarrow \frac{\operatorname{ar}(\triangle ADE)}{\operatorname{ar}(\triangle ABC)} = \frac{1}{4}$ Let ar ($\triangle ADE$) = k, then ar ($\triangle ABC$) = 4k Now, ar (DECB) = ar (\triangle ABC) - ar (\triangle ADE) = 4k - k = 3k \therefore Required ratio = ar (\triangle ADE) : ar (DECB) = k : 3k = 1 : 310. Question 10 (i) Let fourth proportional be x. Then, $(a^3 + 8) : (a^4 - 2a^3 + 4a^2) :: (a^2 - 4) : x$ $\Rightarrow \frac{a^3 + 8}{a^4 - 2a^3 + 4a^2} = \frac{a^2 - 4}{x}$

 $\Rightarrow x(a^{3} + 8) = (a^{2} - 4) (a^{4} - 2a^{3} + 4a^{2}) \text{ [by cross-multiplication]}$ $\therefore x = \frac{(a^{2} - 2^{2}) \times a^{2} (a^{2} - 2a + 4)}{(a^{3} + 2^{3})}$ $= \frac{a^{2} (a - 2)(a + 2)(a^{2} - 2a + 4)}{(a + 2)(a^{2} - 2a + 4)} = a^{2} (a - 2)$

Hence, the required value of fourth proportional is $a^2(a - 2)$.

(ii) i. Draw a line BC = 4.2 cm.

ii. At B, draw an angle of 60° using compass.

iii. Cut an arc of 5 cm on the angle arm at B and name this point as A.

- iv. Draw angle bisector of angle ABC.
- v. Draw a line EFIIBC at a distance of 2 cm which cuts the angle bisector at O.
- vi. Take O as centre and 2 cm as radius, draw a circle which touches both the arms.of the angle.

(iii)Let the height of the building be h m and D be the position of a man.

Height of building = 51.96 m = 52 m (Approx).
