FISCAL POLICY IN INDIA

The government does not perform any business so it cannot earn money to spend. Hence, the government has to raise the money from the economy to enable it to spend that money in terms of requirements and national priorities. The government raises money primarily through 'taxes' and the spending known as 'public expenditure'. A policy which affects either the manner in which the government raises resource or spends is known as 'fiscal policy'. The objectives of any fiscal policy of a country are as follows:

- To ensure that the expenditure in an economy is in terms of national priorities, to boost growth for the welfare of the people.
- (2) Expenditure being incurred should not lead to a price rise situation.
- (3) There should be efficiency in the way of resources that are raised and spent.
- (4) Efforts are to be made to avoid wasteful expenditure in the economy.
- (5) Resources being raised by the government through taxes should not create burden on the common man.
- Taxation should be 'just' and helpful in reducing income inequalities.
- The policy should aim for overall improvement of the welfare of the economy.

In India, there is no fiscal policy by the name; however, the objectives of those are being achieved by the annual financial statement popularly known as the budget which is tabled in the parliament. Hence, budget is not merely the details of expenditure and taxes but is also a policy tool to sub-serve objectives of a fiscal policy. The budget, thus is more than a balance sheet of government receipts and expenditures presented to the parliament.

13.2 PUBLIC EXPENDITURE OF GOVERNMENT

Public expenditure is spending by the central government. Broadly, there are two kinds of expenditure—one is plan expenditure, which is expenditure ear marked for investment in different areas, in the five-year plans for various sectors of the economy. These could be sight as a sight areas. be either capital or revenue in nature. Capital expenditure represents creation of asset in an economy and is thus desirable for growth. For example, money spent for setting

The state of the s GOVERNMENT FINANCES

up power plant is a capital expenditure. Revenue expenditure is recurring in nature, for

aintenance, etc.

Aintenance, etc.

The other is the non-plan expenditure which is an expenditure not covered in the five
The other is the non-plan expenditure which is an expenditure not covered in the five
The other is the non-plan expenditure which is an expenditure not covered in the five
The other is the non-plan expenditure which is an expenditure not covered in the five
The other is the non-plan expenditure which is an expenditure not covered in the five
The other is the non-plan expenditure and could again be either revenue. maintenance, etc. The other is to be incurred and could again be either revenue or capital. In India, year plan expenditure is 70 per cent of the total expenditure whereas plan expenditure is 70 per cent of the total expenditure whereas plan expenditure is 70 per cent of the total expenditure whereas plan expenditure is 70 per cent of the total expenditure whereas plan expenditure is 70 per cent of the total expenditure whereas plan expenditure is 70 per cent of the total expenditure whereas plan expenditure is 70 per cent of the total expenditure whereas plan expenditure is 70 per cent of the total expenditure whereas plan expendi year plan put year plan expenditure is 70 per cent of the total expenditure whereas plan expenditure is non-plan revenue expenditure. The highest expenditure is non-plan revenue expenditure. non-plan expenditure is non-plan revenue expenditure accounting for only 30 per cent. The highest expenditure. 63 per cent of total expenditure.

what are the components of non-plan revenue expenditure? The first is the interest What are the loans taken by the central government both internal and payments (servicing for over 25 per cent of the total expenditures continued in the servicing for over 25 per cent of the total expenditures continued in the servicing for over 25 per cent of the total expenditures continued in the servicing for over 25 per cent of the total expenditures continued in the servicing for over 25 per cent of the total expenditures continued in the servicing for over 25 per cent of the total expenditures continued in the servicing continued in the servicing for over 25 per cent of the total expenditures continued in the servicing continue payments (secondly, subsidies external) accounting for over 25 per cent of the total expenditure. Secondly, subsidies external) accounting for over 25 per cent of the total expenditure. Secondly, subsidies external) accounting for over 25 per cent of the total expenditure. The country for over 90 per cent of non-plan revenue expenditure. pension to account for over 90 per cent of non-plan revenue expenditure. These expenses are would account for over 90 per cent of non-plan revenue expenditure. These expenses are also known as consumption of the government as no assets are created.

13.3 RECEIPTS BY THE GOVERNMENT

The expenditure in an economy is met out of receipts by the government through various Sources. The receipts could be revenue (which do not create any interest liability for the government, regularity in their receipts and not representing borrowings) and the other as capital (either creating a liability for the government or less certain of their receipt or borrowings). Of the total receipts, 90 per cent is revenue and 10 per cent is capital receipts. The primary source of revenue receipts is tax revenue (84 per cent of total receipts). Taxes

How to distinguish direct tax from indirect tax? Direct tax is a tax where the subject on could be either direct or indirect. whom the tax has been levied is identifiable, who has to pay the tax and the tax burden cannot be shifted. Examples can be income tax, corporate taxes, wealth tax, etc. In case if the subject is not identifiable or if the burden can be shifted it is an indirect tax. Common examples are excise duty (payable by companies on manufacturing activities), customs duty (duty on import of goods), service tax (tax on services being rendered by service providers), etc.

Fifty-five per cent of the tax revenue arrives through direct taxes while 45 per cent of the revenue is from indirect taxes. The base on which the tax is applied for indirect taxes could either be on value (ad valorem) or specific on a particular attribute (length of staples in cotton). India primarily follows an ad valorem indirect tax structure.

Certain taxes are levied by the central government and at the same time it is also collected by the central government (income tax, customs duty, excise duty and service tax) certain tax), certain taxes levied by the central government but collected by the state governments (central sales) (central sales tax levied on inter-state movement of goods). A few other taxes are levied and collected by collected by the respective state governments (sales tax, octroi, municipal taxes, road tax, entergin—

The basis of sharing the tax revenue between the centres and the states are decided by the finance commission. The thirteenth finance commission under the chairmanship of Shri Viin. It Shri Vijay Kelkar has since submitted its report and is effective from 2010 to 2015.

There are two additional taxes—one is the surcharge which is imposed for additional revenue considerations by imposing an additional percentage on the absolute amount of tax payable. Suppose surcharge on a tax is 5 per cent and the tax payable is ₹100 then the total tax liability including surcharge would be ₹105.

The other is cess which is similar in application as the surcharge except that the amount collected by way of cess is meant solely for specific funding/cause like education cess, the

amount collected would go for funding of education only.

Components of revenue receipts other than taxes are dividends received by the Components of revenue receipts other than tases of the state governments etc. Similarly, government from public sector, payment of interest by the state governments etc. Similarly, government from public sector, payment of interest of loan, grants, assistance capital receipts of the government comprises of recoveries of loan, grants, assistance received by the government etc.

NATURE OF GOVERNMENT BUDGET 13.5

Thus, so far we have discussed the expenditure and receipts. What happens if expenditure exceeds receipts? It would result in a deficit or otherwise in a surplus and if both match then balanced.

What is good for an economy—a deficit, surplus or a balanced budget? To answer this question, a few aspects should be understood. There is a difference between personal and government budget and that being in a personal budget, spending is strictly in accordance with income. However, in a government budget, it is important to understand that expenditure is seen first and the reason for receipt is because of the need for spending in the economy. That is, a government budget by its very structure is deficit-oriented.

Only in an economy where receipts surpass spending can there be a surplus or the government scales-down spending to match the receipts. This could drag down growth as lesser expenditure is taking place. More so in India, given the inflexibility to bring down non-plan expenditure, any reduction in expenditure would imply lesser capital expenditure and expenditure on social sector.

A balanced budget is good only if the budget is seen as a balance sheet or a statement of accounts of the government of India. A better thing can be a balanced budget multiplied which is an incremental increase in expenditure in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in expenditure in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year is met out of incremental increase in any given year in any increase in receipts in a given year.

Different components of expenditure and receipts are explained for a better understanding of deficits in the budget.

U-					- dilly
	Receipts	₹ in crores		Expenditure	J
1.	Revenue receipts	90,000	4.	Non-plan revenue expenditure a) (interest payment) Non-plan capital expenditure	₹ in crores 90,000 (50,000) 25,000
	Capital receipts (of which market borrowings of the government)	(10,000)	5.		
3.	Total receipts (1 + 2)	otal receipts 1,00,000	6.	Plan capital expenditure Plan revenue expenditure Total revenue expenditure (4 + 7)	50.000
			7.		50,000
			8.		1,00,000
			9.	Total capital expenditure (5 + 6)	75,000
			10.	Total expenditure (8 + 9)	1,75,000

From the above example, we acquire to know various kinds of deficit.

- (1) Budgetary deficit is total receipts (3) less total expenditure (10) ₹75,000 crores).
- (2) Fiscal deficit is total receipts (but excluding government market borrowings) less total expenditure (₹85,000 crores).
- (3) Revenue deficit is revenue receipts (1) less revenue expenditure (8) (₹ 10,000 crores).
- (4) Primary deficit is fiscal deficit less interest payments (4a) (₹35,000 crores) (A negative sign before the deficit would indicate surplus).

Since economies have begun targeting the fiscal deficit, usage of budgetary deficit has been discontinued. Of the remaining three, fiscal, revenue and primary which can be said to being potentially most dangerous? 'It is not the fiscal but the revenue deficit'. As revenue deficit implies borrowing money for meeting the consumption of the government and not to create assets. Borrowings per se are not bad as long as assets get created and the assets

In India, 70 per cent of the fiscal deficit is accounted for by revenue deficit. The can service the borrowings. primary deficit, on the other hand, tests for the sensitivity of interest payments towards fiscal deficit or how far the interest payments are responsible for the fiscal deficit.

A high primary deficit would mean that fiscal deficit is on account of factors other than the interest payments and structural in nature. A low primary deficit indicates that the high fiscal 1 C.

high fiscal deficit is on account of interest payments, which is the case in India.

Hence we started by saying that the nature of government budget is deficit-oriented but too much of deficit is also bad as it contributes to inflation. It is difficult to say as what could be the 'safe' level of fiscal deficit.

A basic thumb rule is it should be under 3 per cent of GDP with a balanced budget multiplier. There are various compulsions of the government which make expenditure control difficult especially given their responsibilities for socio-welfare schemes,

rastructure development, etc.

Still the government in line with the above had set definite time frame for reducing and Budget Management. Still the government in line with the above had set defined and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility and Budget Management the fiscal and revenue deficit under the Fiscal Responsibility 0.5 per cent every year to be Act (FRBMA) for gradual reduction of revenue deficit by 0.5 per cent every year to be Act (FRBMA) for gradual reduction of revenue deficit the aim was to reduce it brought down to zero by 2007–2008. In respect of fiscal deficit the aim was to reduce it 2004 to 2005. Clearly, the targets have not brought down to zero by 2007–2008. In respect of fiscal by 0.3 per cent every year beginning from 2004 to 2005. Clearly, the targets have not been by 0.3 per cent every year beginning from 2004 to 2005.

nieved.

13.6 TAX REFORMS—INDIRECT TAXES

It was mentioned previously that indirect taxes contribute about 45 per cent of the It was mentioned previously that make taxes is excise duty which is payable on value tax revenue. A major source of indirect taxes is excise duty like other indirect of manufacturing activities in the economy. Excise duty like other indirect taxes by inherent structure is regressive in nature.

For example, the excise duty on salt is 10 per cent on a factory price of ₹10 who means the retail price for a packet of salt is ₹11 with an excise of ₹1 per packet going to the government. The price of ₹11 is being paid by a person who is earning ₹500 per month and also even by a person whose earning is ₹1,00,000 per month. It tax burden is higher on the people with lower income and that is what is meanth

Secondly, multiple excise structure with multiple rates giving rise to different regressive. interpretation on tax payable giving scope for evasion, litigations and revenue loss not

The third issue in excise is the cascading effect of taxes. For example, Maruti buyon government. from MRF company. The purchase price of tyres from MRF would have a composed of excise duty, which becomes the input price for Maruti and excise duty has to be on the full value of car. This is known as the cascading effect, that is, taxes increase manufacturing cost and get again taxed.

The government has tried to address the issue by reducing the slabs of excise dury and lower excise duty on essentials or mass goods to minimize the regressive character. regard to the cascading effect, the best way to prevent it is by introducing value additionally which is a tay on the relationship. (VAT) which is a tax on the value additions at each stage of production rather than the stage of produ

finished goods. Provided the federal structure both centre and state government VAT would have to be at both levels.

An initiation was made with the government by first introducing the modified value An initial (MODVAT) scheme which allowed partial adjustment of duties on capital goods added tax (MODVAT) scheme which allowed partial adjustment of duties on capital goods added tax (1) added tax (2) added tax (2) added tax (3) and adjustment of duties on capital goods purchased, however, it was restrictive in nature. The government replaced MODVAT with purchased, some of input credit for the excise duties inputs (raw materials, capital goods prices) purchased for direct use in production known as correct. a wider screen purchased for direct use in production known as central value added tax (CENVAT) at the central level during 2004.

A major reform has been at the state level with the replacement of sales tax with state VAT. The credit for this goes to Shri. Asim Das Gupta the then Finance Minister, West Bengal and can be hailed as a landmark in tax reforms.

Why it is a major reform? First to make all the state governments to agree for the replacement of sales tax with a state VAT. The sales tax regime was very complicated with different sales tax rates for same products in different states. A state VAT required one product one tax rate' across all states and to drive a consensus for this was herculean effort as some states would stand to gain and others would tend to lose.

If in a particular state sales tax was a high of say 24 per cent but the consensus under a state VAT was only 12.5 per cent for that good clearly there would be revenue loss for that state government.

State VAT made effective from 1 April 2005 has the following salient features:

- (1) State VAT is not a new tax but only a change in the way of collecting tax from the final stage to the value addition stage.
- (2) This allows for set-off of duties from the tax payable but against original invoices/ challans of the tax paid on the inputs purchased.
- (3) There would be a uniform 4 per cent state VAT on 270 mass-consumed goods across all states, a uniform VAT of 12.5 per cent on 280 goods and 1 per cent on gold and silver ornaments across all states.
- (4) Those with a turnover of ₹5 lakh and less would not be liable for any VAT, from ₹5 to 50 lakh a composite tax but with no set-off. VAT is payable for turnover exceeding ₹50 lakhs.

The state VAT has helped in checking tax evasion by introducing a 'bill culture', transparency in tax administration and collection, increased revenue for the state government. Further, as part of deeper reforms, the government is proposing to integrate taxing of goods and services at differential rate separately into one tax with one tax rate as goods and services tax (GST) with both the centre and states taxing concurrently as the central government GST (CGGST) and the state government GST (SGGST).

This would considerably simplify the indirect tax regime, enlarge the tax base for larger resource generation and thus lower GST rate resulting in lower prices does of goods and services but also in ensuring the revenue for the government not to suffer. The government has a broad based consensus with the proposes to implement the GST regime as soon as there is broad based consensus with the states and technology put in place. Reforms in indirect taxes are commendable and the government's proposal of propelling to GST would place India with an efficient indirect tax regime at par with other mature economies of the West.

TAX REFORMS—DIRECT TAXES

Direct taxes as seen earlier contribute 55 per cent of the tax revenue and it is a better way of service to pay', higher at way of taxation as it is progressive in nature and based on 'ability to pay', higher the income, progressively, more the tax rate leading to greater revenue with least burden on the many the masses or those with low income. Direct taxes particularly income tax is progressive and in contrast to other taxes which are regressive in nature.

The progressivity of income taxes in periods of inflation pushes people up the tax bracket, as pay packets get inflated due to inflation resulting in higher taxes paid and reduced spending by the individuals. On one hand, the coffers of the government fills up because of people moving up the tax bracket and on the other there is a reduced spending.

This phenomenon is known as 'Fiscal drag'.

How many people do you think are tax payers in the economy? At present, 3.5 per cent are tax payers in the Indian economy, about 31.5 million in a At present, 3.5 per cent are tax payers in the population of over one billion people. This number is low especially considering the fact that population of over one billion people. This manner is middle class, the affluent class India in its growing economy, with increased income, rising middle class, the affluent class and large number joining the elite billionaire club. In comparison, the number of tax payers has only increased by 11 per cent.

What are the ways through which tax payers and tax revenue can be increased? There could be three ways through which it can be increased and are as follows:

- (1) Increase in the direct tax rates.
- (2) Increase in the tax base.
- (3) Enforce tax compliance.

Increase in Tax Rate

Any increase in tax rate is seen negatively and resented by the people. There is also a relationship between the direct tax rate and revenue generated. Starting from a low tax rate and gradually increasing it, is positively related and increases tax revenue. However, beyond a level, any increase in tax rates becomes counter-productive as it lowers tax revenue rather than in increasing it. This is popularly known as the 'Laffer curve'.

An economy being on the Laffer curve implies that any increase in tax rates would lower the tax revenue and on the contrary lowering of tax rate would lead to increased revenue for the government. It is widely believed that India is on the Laffer curve with limited prospects of raising taxes.

This is because high tax rates lead to tax evasion, non-disclosure of income and generation of black money (taxes not paid). All efforts are made to minimize the incidence of taxes legally and illegally. It serves as a disincentive in the economy leading to lowering of income and the output. Hence, raising tax rates is not an option available in India.

Increase in Tax Base

Tax base refers to that threshold level of income on which taxes become applicable. India has an exemption level, that is, if income is less than ₹1.6 lakh (₹1.9 lakh for women) per

GOVERN

annum tax more peop

At pre inflation (have incre middle cl the midd payers' b

The C All secto net. Agr by the c feasible

> and Tec Ho

> > a le trai dir

un th

tra m annum taxes are not payable. So one way could be to lower the exemption level so that annum taxes are annum taxes are and thereby an increase in tax payers and tax revenue.

The present, the exemption level is very low given the present inflation.

At present, the exemption level is very low given the present inflation. Besides the At present, and present inflation. Besides the inflation does not factor in cost of education, transport and property prices all of which increased manifold in recent times creating hardships and making is the control of the contro inflation does and inflation does are increased manifold in recent times creating hardships and making it difficult for the have increased have increased to make both the ends meet. Lowering the exemption would further burden iddle class and more so by this way it may be possible to increase the first burden middle class and more so by this way it may be possible to increase the 'number of tax the middle payers' but 'not necessarily tax revenue' as many would be marginal tax payers.

The other way to increase the tax base is to bring in untaxed sectors under the tax net. All sectors with the possible exception of the agricultural sector are already under the tax net. All sections.

Agriculture being a state subject can be taxed only by the state government and not by the central government. Thus, like increasing tax rate, even increasing tax base is not a

feasible option for raising direct tax revenue in India.

Ensuring Tax Compliance

This is to ask the question that, is every person who ought to pay taxes is paying his/her taxes in terms of existing laws and the second are the people who are not paying should actually be paying taxes. This is what is meant by tax compliance. The government has made an initiation by making the income tax return form user friendly and easy to fill up by an individual and it is known as 'Saral'.

The problem in India is that of tax compliance with lot of leakages, large-scale tax evasion and black money. It is estimated that over 40 per cent of GDP is black money which is circulating in the economy on which no taxes are paid.

13.8 BLACK MONEY

Black money has nothing to do with the colour except to convey that it is necessarily an evil. It is an unaccounted income, earned through illegal channels and put to unproductive anti-national use and conspicuous consumption. Checking black money and tax evasion are the critical aspects of tax compliance.

Black money gets generated when big transactions are performed in cash, source and end use not possible to ascertain. For example, a friend gives you cash of ₹1000. Technically, it is black money, may be not so in your case because the amount is small.

However, say somebody gives ₹10 lakh in cash it is definitely black money.

In other way, all transactions where payments have to be made or received beyond a level of say ₹10,000 and above if done in cash is black money. Or still differently, transactions performed other than by way of cheques, drafts, credit cards, debit cards, direct

direct transfers of money in bank accounts would be black money.

If you deposit ₹10 lakh in cash in your bank account it is black money (unless and til if—— until if you show the source from where you got it). If your father sends you a cheque of the same the same amount and you deposit it in your bank account it is a 'white transaction'. Thus, transactions performed other than through banks and post offices would generate black money.

Why does black money get generated? The primary reason for the black money generation is high tax rates, complex tax laws and provisions, strict controls on transactions, large amount of cash dealing, people not having bank accounts, land and property deals in cash, need for money to get jobs performed through various government property deals in cash, need for money to get jobs personal and colleges, meeting dowry departments, donations required for admission in schools and colleges, meeting dowry departments, donations required for admission in solutions and also for doing illegal activities both within and needs, compulsions of social functions and also for doing illegal activities both within and tside the country.

What has the government done to curb black money? Not much except the voluntary

Can the amount disclosed and demonstrate.

What has the government done to curb place mount disclosed and demonetization of disclosure schemes and giving amnesty for the amount disclosed and ₹10,000 notes. disclosure schemes and giving amnesty for the amount ₹5000 and ₹10,000 notes which higher denominated currencies. (Recall India had earlier ₹5000 and ₹10,000 notes which

have now been discontinued and cease to be legal tenders.) ve now been discontinued and cease to be legal tender. The government has also declared that all transactions over ₹10,000 should be done. The government has also declared that all por be made by banks against cash every like the made by banks.

The government has also declared that all translated by banks against cash exceeding through cheques/drafts. Drafts would not be made by banks against cash exceeding through cheques/drafts. Drafts would not be the through cheques/drafts. Drafts would not be throu and it is mandatory to quote the PAN number for all transactions over ₹50,000. d it is mandatory to quote the PAIN Humber.

The income tax offices at the four metros have been computerized and networked,

The income tax offices at the rour metros and transactions being performed by them. All Registrar creating a database of tax payers and transactions, automobile manufactures creating a database of tax payers and transactions, automobile manufactures, etc., are offices registering land deals, credit card companies, automobile manufactures, etc., are required to furnish information beyond a cut off level.

The government with a view to have better tax compliance, lesser tax evasion, is The government with a view to have simplify tax laws and provisions, plug leakages, proposing the direct tax code which would simplify tax laws and provisions, plug leakages, proposing the direct tax code willen would be raise exemption levels and consider further lowering tax rates. However, till then tax raise exemption levels and constraint to further raise tax revenue for the government, compliance will be a major constraint to further raise tax revenue for the government.

13.9 VIEWS ON TAX COMPLIANCE

- (1) Has it ever occurred why people do not want to pay taxes? Paying taxes globally is a matter of pride and joining hands with the government to provide better for the masses and improved civic amenities. Not so in India.
- (2) That is, because, people doubt the intentions of the government in using it productively for the masses. Tax compliance would thus require austerity measures on the government lesser lavish spending and more responsiveness and sensitiveness towards the spending for masses.
- (3) Tax compliance should be top-driven. Have you ever seen any top political leader bureaucrat going to file his income tax return at the IT office in-person. No! it is not required officially but it sends the right message to people that how it is of high priority despite their busy schedule. Who is the first person seen as voting in a election? It is the President, Prime Minister and other top leaders. 'Why?' Just to send the right message to the people to come out and cast their vote.
- (4) Hence tax compliance should start right from the top. The President, PM, Chief Ministers and senior leaders all of them filing their tax returns in-person.
- (5) Who is the highest tax payer in the country? It is difficult to say or even more difficult to say or even more difficult. to say who are the top 100 tax payers in the country. What prevents the government from honouring them. from honouring them at a public ceremony acknowledging their contribution to

national taxes.

returns. It should not be difficult but could go a long way in increasing the compliance.

**Goult to find out regular tax pavers, a small well words to the compliance. It is not difficult to find out regular tax payers, a small well-worded thank you card can

be sent to them each time after they have filed their return. Today, technology support is available to generate such computerized letters. What is being meant here is that the incentive for a tax payer to pay his taxes, a mere token of appreciation can work.

Our policies for tax evasion can be said to be 'soft'. What is required is strong punishment for tax evaders, those generating black money uniform for all irrespective of whether political leader, bureaucrat, private organization, etc., to serve as a lesson and a source of discouragement.

While tax compliance would remain an issue, still there are some other issues which can help augment revenue to the government like completely simplified tax regime based on income at low rates with no exemptions easily enforceable and minimizing leakages.

What is a an efficient tax system? An efficient tax system should allow for raising revenue without burdening the common man. It should provide for BECN briefed as below:

B buoyancy (raise tax revenue with increased growth of an economy rather than by changing the tax rates).

E effectiveness (promoting tax compliance).

C cost-effective (lower cost of collection with increased tax revenue).

N-neutral to economic decisions (not influencing location of businesses).

The present tax structure in India is still evolving and moving in the right direction of a GST for indirect taxes and direct tax code for direct taxes. While all these efforts at increasing tax compliance are appreciable there are other issues which should also get adequate attention of the government and that is cost of collection of taxes is continuously increasing. There is a requirement to arrest this trend and ensure higher collections at lower costs.

The other is given the inflexibility of expenditure, there is scope for rationalizing government expenditure by reviewing the requirement for so many ministries, merging ministries for sharper focus, abolition of vacant posts, greater austerity in government spending and small expenditure cuts wherever feasible. It is these small cuts which would make the picture larger. And for once economics should prevail over political compulsions in the larger. in the larger interests of the economy.

We have covered public expenditure, taxes and different kinds of deficits as part of the budgetant. budgetary process. A typical budget presentation initiates with a review of the economy in terms of the Economic Survey presented in the Parliament (a few days before the budo is presented), which is followed by the expenditure proposals and finally the tax proposal which most anxiously awaited by all.

which most anxiously awaited by an.

All receipts in the economy are retained in the consolidated fund of India and money can be utilized only after the budget is passed by both the Houses of Parliament, which that Parliament provides approval for various expenditure and permits withdrawal of fund for various expenditure needs of the economy. Certain expenses can be incurred by the government without the approval of Parliament and are known as 'charged expenditure such as meeting interest obligations, salaries and emoluments to constitutionally appointed heads such as chief justice of India, CVC, CAG, etc.

There are two other kinds of budgets interim and vote on account. Interim is a kind of budget addressed for a period less than a full year. Vote on account is not a type of budget strictly, but seeks approval for ongoing expenditure needs, no fresh expenditure or tax proposals. This is normally presented when the government is about to face elections or when the time period is too short even for an interim budget to be presented. In any case, the choice of the type of budget to be presently lies with the government.

In case, election date has already been announced the election commission is empowered to restrain the government from presenting an interim budget but present a vote on account only. Traditionally, budgets are shrouded with secrecy and it lacks transparency. There should be greater and broader participation of people from all walks of life to ensure budgets being prepared are not only of the government but also of the people.

The budgets are focused on 'outlays' or spending under different heads but no provision is made to know the 'outcome' of such spending. The other aspect is the outlays are not linked to the actual need. For example, the budget might propose increased outlay of say ₹100 crores on education in comparison to an increase of only ₹50 crores in the last budget. However, there is no mention of how much actually needs to be spent on education in total.

The budgets year after year get engaged in micro issues for example taxes on tooth pastes, etc., which is not required. The budget may address broad issues of the tax rates in general rather than go into the minutest of details or should be more macro-oriented and micro-detailing done through annexures, for a better understanding of the underlying macro-issues in a budget.

Such reforms in the budgetary process itself also need to be integrated as part of the larger reforms. All the reforms in the country are around the government but not in the government.
