

Chapter - 14

Natural Resources

1. What is the green house effect?
2. How is ozone layer formed?
3. What is biogeochemical cycles?
4. What is water cycle?
5. Give two ways in which CO_2 is fixed.
6. Name the major green house gas responsible for causing global warming.
7. What is the role of nitrogen fixing bacteria in the Biosphere?
8. How do ozone layer gets depleted?
9. How does ozone layer protect us from harmful effects of the environment?
10. How do water cycle help the organisms?
11. How is oxygen maintained in the atmosphere?
12. What are CFC's and why are there considered as harmful for the life on earth?
13. What is global warming? What is its effects?

14. With the help of labelled diagram explain in brief the carbon cycle in nature

15. State two forms in which elemental oxygen is found in the earth's atmosphere. Mention in brief the essential function performed by each at the place they are found.

16. Illustrate nitrogen cycle in biosphere.
