Ex 3.1

Binary Operations Ex 3.1 Q1(i)

We have,

$a * b = a^b$ for all $a, b \in N$

Let $a \in N$ and $b \in N$

$\Rightarrow \quad a^b \in N$

$\Rightarrow \quad a * b \in N$

The operation $*$ defines a binary operation on N

Binary Operations Ex 3.1 Q1(ii)

We have,

$a \circ b = a^b$ for all $a, b \in Z$

Let $a \in Z$ and $b \in Z$

$\Rightarrow \quad a^b \notin Z \qquad \Rightarrow a \circ b \notin Z$

For example, if $\quad a = 2, \; b = -2$

$\Rightarrow \quad a^b = 2^{-2} = \frac{1}{4} \notin Z$

$\therefore \quad$ The operation '$\circ$' does not define a binary operation on Z.

Binary Operations Ex 3.1 Q1(iii)

We have,

$$a * b = a + b - 2 \text{ for all } a, b \in N$$

Let $a \in N$ and $b \in N$

Then, $a + b - 2 \notin N$ for all $a, b \in N$

$\Rightarrow \quad a * b \notin N$

For example $a = 1$, $b = 1$

$\Rightarrow \quad a + b - 2 = 0 \notin N$

$\therefore$ The operation $*$ does not define a binary operation on N

Binary Operations Ex 3.1 Q1(iv)

We have,

$$S = \{1, 2, 3, 4, 5\}$$

and, $a \times_6 b$ = Remainder when ab is divided by 6

Let $a \in S$ and $b \in S$

$\Rightarrow \quad a \times_6 b \notin S$ for all $a, b \in S$

For example, $a = 2$, $b = 3$

$\Rightarrow \quad 2 \times_6 3$ = Remainder when 6 is divided by 6 $= 0 \notin S$

$\therefore \quad \times_6$ does not define a binary oparation on S

Binary Operations Ex 3.1 Q1(v)

We have,

$$S = \{0, 1, 2, 3, 4, 5\}$$

and, $$a +_6 b = \begin{cases} a + b; \text{ if } a + b < 6 \\ a + b - 6; \text{ if } a + b \geq 6 \end{cases}$$

Let $a \in S$ and $b \in S$ such that $a + b < 6$

Then $a +_6 b = a + b \in S \quad [\because a + b < 6 = 0, 1, 2, 3, 4, 5]$

Let $a \in S$ and $b \in S$ such that $a + b > 6$

Then $a +_6 b = a + b - 6 \in S \quad [\because \text{if } a + b \geq 6 \text{ then } a + b - 6 \geq 0 = 0, 1, 2, 3, 4, 5]$

$\therefore \quad a +_6 b \in S$ for $a, b \in S$

$\therefore \quad +_6$ defines a binary oparation on S

Binary Operations Ex 3.1 Q1(vi)

We have,

$$a \circ b = a^b + b^a \text{ for all } a, b \in N$$

Let $a \in N$ and $b \in N$

$\Rightarrow \quad a^b \in N$ and $b^a \in N$

$\Rightarrow \quad a^b + b^a \in N$

$\Rightarrow \quad a \circ b \in N$

Thus, the operation '$\circ$' defines a binary relation on N

Binary Operations Ex 3.1 Q1(vii)

We have,

$$a * b = \frac{a-1}{b+1} \text{ for all } a, b \in Q$$

Let $a \in Q$ and $b \in Q$

Then $\frac{a-1}{b+1} \notin Q$ for $b = -1$

$\Rightarrow$ $a * b \notin Q$ for all $a, b \in Q$

Thus, the operation $*$ does not define a binary operation on Q

Binary Operations Ex 3.1 Q2

(i) On $\mathbf{Z}^+$, * is defined by $a * b = a - b$.
It is not a binary operation as the image of (1, 2) under * is $1 * 2 = 1 - 2$
$= -1 \notin \mathbf{Z}^+$.

(ii) On $\mathbf{Z}^+$, * is defined by $a * b = ab$.
It is seen that for each $a, b \in \mathbf{Z}^+$, there is a unique element ab in $\mathbf{Z}^+$.
This means that * carries each pair (a, b) to a unique element $a * b = ab$ in $\mathbf{Z}^+$.
Therefore, * is a binary operation.

(iii) On $\mathbf{R}$, * is defined by $a * b = ab^2$.
It is seen that for each $a, b \in \mathbf{R}$, there is a unique element ab^2 in $\mathbf{R}$.
This means that * carries each pair (a, b) to a unique element $a * b = ab^2$ in $\mathbf{R}$.
Therefore, * is a binary operation.

(iv) On $\mathbf{Z}^+$, * is defined by $a * b = |a - b|$.
It is seen that for each $a, b \in \mathbf{Z}^+$, there is a unique element $|a - b|$ in $\mathbf{Z}^+$.
This means that * carries each pair (a, b) to a unique element $a * b =$
$|a - b|$ in $\mathbf{Z}^+$.
Therefore, * is a binary operation.

(v) On $\mathbf{Z}^+$, * is defined by $a * b = a$.
* carries each pair (a, b) to a unique element $a * b = a$ in $\mathbf{Z}^+$.
Therefore, * is a binary operation.

(vi) on R, * is defined by $a * b = a + 4b^2$
it is seen that for each element $a, b \in R$, there is unique element $a + 4b^2$ in R
This means that * carries each pair (a, b) to a unique element $a * b =$
$a + 4b^2$ in R.
Therefore, * is a binary operation.

Binary Operations Ex 3.1 Q3

It is given that, $a * b = 2a + b - 3$
Now

$$\begin{aligned} 3 * 4 &= 2 \times 3 + 4 - 3 \\ &= 10 - 3 \\ &= 7 \end{aligned}$$

Binary Operations Ex 3.1 Q4

The operation * on the set A = {1, 2, 3, 4, 5} is defined as
$a * b$ = L.C.M. of a and b.
2*3 = L.C.M of 2 and 3 = 6. But 6 does not belong to the given set.
Hence, the given operation * is not a binary operation.

Binary Operations Ex 3.1 Q5

We have,

$$S = \{a, b, c\}$$

We know that the total number of binary operation on a set S with n element is n^{n^2}

$\Rightarrow$ Total number of binary operation on $S = \{a, b, c\} = 3^{3^2} = 3^9$

Binary Operations Ex 3.1 Q6

We have,

$$S = \{a, b\}$$

The total number of binary operation on $S = \{a, b\}$ in $2^{2^2} = 2^4 = 16$

Binary Operations Ex 3.1 Q7

We have,

$$M = \left\{ \begin{bmatrix} a & 0 \\ 0 & b \end{bmatrix} : \ a, b \in R - \{0\} \right\} \text{ and}$$

$$A * B = AB \text{ for all } A, B \in M$$

Let $A = \begin{bmatrix} a & 0 \\ 0 & b \end{bmatrix} \in M$ and $B = \begin{bmatrix} c & 0 \\ 0 & d \end{bmatrix} \in M$

Now, $AB = \begin{bmatrix} a & 0 \\ 0 & b \end{bmatrix} \begin{bmatrix} c & 0 \\ 0 & d \end{bmatrix} = \begin{bmatrix} ac & 0 \\ 0 & bd \end{bmatrix}$

$\therefore \quad a \in R, \ b \in R, \ c \in R, \ \& \ d \in R$

$\Rightarrow \quad ac \in R$ and $bd \in R$

$\Rightarrow \quad \begin{bmatrix} ac & 0 \\ 0 & bd \end{bmatrix} \in M$

$\Rightarrow \quad A * B \in M$

Thus, the operater $*$ difines a binary operation on M

Binary Operations Ex 3.1 Q8

S = set of rational numbers of the form $\frac{m}{n}$ where $m \in Z$ and $n = 1, 2, 3$

Also, $a * b = ab$

Let $a \in S$ and $b \in S$

$\Rightarrow \quad ab \notin S$

For example $a = \frac{7}{3}$ and $b = \frac{5}{2}$

$\Rightarrow \quad ab = \frac{35}{6} \notin S$

$\therefore \quad a * b \notin S$

Hence, the operater $*$ does not define a binary operation on S

Binary Operations Ex 3.1 Q9

It is given that, a*b = 2a + b

Now

(2*3) = 2× 2 + 3

= 4 + 3

= 7

(2*3)*4 = 7*4 = 2 × 7 + 4

= 14 + 4

= 18

Binary Operations Ex 3.1 Q10

It is given that, a*b = LCM (a, b)

Now

5*7 = LCM (5, 7)

= 35

Ex 3.2

Binary Operations Ex 3.2 Q1

We have,

$$a * b = l.c.m.(a,b) \text{ for all } a,b \in N$$

(1)

Now,

$$2*4 = l.c.m\ (2,4) = 4$$
$$3*5 = l.c.m\ (3,5) = 15$$
$$1*6 = l.c.m\ (1,6) = 6$$

(ii)

Commutativity:

Let $a,b \in N$ then,

$$a*b = l.c.m(a,b)$$
$$= l.c.m(b,a)$$
$$= b*a$$

$\Rightarrow \quad a*b = b*a$

$\therefore \quad *$ is commutative on N.

Associativity:

Let $a,b,c \in N$ then,

$$(a*b)*c = l.c.m(a,b)*c$$
$$= l.c.m(a,b,c) \qquad ---(i)$$

and, $a*(b*c) = a*l.c.m(b,c)$
$$= l.c.m(a,b,c) \qquad ---(ii)$$

From (i) and (ii)

$$(a*b)*c = a*(b*c)$$

$\therefore \quad *$ is associative on N.

Binary Operations Ex 3.2 Q2

(i) Clearly, by definition $a*b = 1 = b*a$, $\forall a,b \in N$

Also, $(a*b)*c = (1*c) = 1$

and $a*(b*c) = (a*1) = 1 \qquad \forall a,b,c \in N$

Hence, N is both associative and commutative.

(ii) $a*b = \frac{a+b}{2} = \frac{b+a}{2} = b*a$,

which shows * is commutative.

Further, $(a*b)*c = \left(\frac{a+b}{2}\right)*c = \frac{\left(\frac{a+b}{2}\right)+c}{2} = \frac{a+b+2c}{4}$

$$a*(b*c) = a*\left(\frac{b+c}{2}\right) = \frac{a+\left(\frac{b+c}{2}\right)}{2} = \frac{2a+b+c}{2} \neq \frac{a+b+2c}{4}$$

Hence, * is not associative.

$$=a+b+c+ab+bc+ac+abc \qquad ---(i)$$

Again, $a*(b*c)=a*(b+c+bc)$

$$=a+b+c+bc+ab+ac+abc \qquad ---(ii)$$

$$a \; e \; b = a^2 + b^2 = b^2 + a^2 = b \; e \; a$$

$\Rightarrow \quad a \; e \; b = b \; e \; a$

$\therefore \quad e$ is commutative on Q.

Associative:

Let $a, b, c \in Q$, then

$$(a \; e \; b) \; e \; c = (a^2 + b^2) \; e \; c = (a^2 + b^2)^2 + c^2 \qquad ---(i)$$

and, $\quad a \; e \; (b \; e \; c) = a \; e \; (a^2 + b^2) = a^2 + (b^2 + c^2)^2 \qquad ---(ii)$

From (i) & (ii),

$$(a \; e \; b) \; e \; c \neq a \; e \; (b \; e \; c)$$

$\therefore \quad e$ is not associative on Q.

Binary Operations Ex 3.4 Q8

The binary operation * on **N** is defined as:

a * *b* = H.C.F. of *a* and *b*

It is known that:

H.C.F. of *a* and *b* = H.C.F. of *b* and *a*,. *a*, *b* ∈ **N**.

Therefore, *a* * *b* = *b* * *a*

Thus, the operation * is commutative.

For *a*, *b*, *c* ∈ **N**, we have:

(*a* * *b*)* *c* = (H.C.F. of *a* and *b*) * *c* = H.C.F. of *a*, *b*, and *c*

a *(*b* * *c*)= *a* *(H.C.F. of *b* and *c*) = H.C.F. of *a*, *b*, and *c*

Therefore, (*a* * *b*) * *c* = *a* * (*b* * *c*)

Thus, the operation * is associative.

Now, an element *e* ∈ **N** will be the identity for the operation * if *a* * *e* = *a* = e* *a*, ∀ *a* ∈ **N**.

But this relation is not true for any *a* ∈ **N**.

Thus, the operation * does not have any identity in **N**.

We know that e will be identity element with respect to $*$ if

$a*e=e*a=a$ for all $a\in S$

$\Rightarrow$ $a*a=a,\ a*b=b,\ a*c=c,\ a*d=d$

$\therefore$ a will be the identity element

Again,

b will be the inverse of a if

$b*a=a*b=e$

From the above table

$a*a=a,\quad b*b=b, c*c=c$ and $d*d=d$

$\therefore$ Inverse of $a=a$

$b=b$

$c=c$

$d=d$

(ii)

From the above table, we can observe

$aob = boa, \quad boc = cob$

$aoc = coa, \quad bod = dob$

$aod = doa, \quad cod = doc$

$\therefore$ 'o' is commutative on S

Again, for $a, b, c \in S$

$(aob)oc = aoc = a$ ---(i)

$ao(boc) = aoc = a$ ---(ii)

From (i) & (ii)

$(aob)oc = ao(boc)$

So, 'o' is associative on S

Now, we have,

$aob = a$

$bob = b$

$cob = c$

$dob = d$

$\Rightarrow$ b is the identity element with respect to 'o'

We know that x will be inverse of y

If $xoy = yox = e$

$\Rightarrow$ $xoy = yox = b$ $[\because e = b]$

Now, from the above table we find that

$bob = b$

$cod = b$

$doc = b$

$\therefore$ $b^{-1} = b$, $c^{-1} = d$, and $d^{-1} = c$

Not: a^{-1} does ont exist.

Binary Operations Ex 3.5 Q10

Let $X = \{0, 1, 2, 3, 4, 5\}$.

The operation * on X is defined as:

$$a * b = \begin{cases} a+b & \text{if } a+b<6 \\ a+b-6 & \text{if } a+b \geq 6 \end{cases}$$

An element $e \in X$ is the identity element for the operation *, if

$a * e = a = e * a \; \forall a \in X$.

For $a \in X$, we observed that:

$a * 0 = a + 0 = a \qquad [a \in X \Rightarrow a + 0 < 6]$

$0 * a = 0 + a = a \qquad [a \in X \Rightarrow 0 + a < 6]$

$\therefore a * 0 = a = 0 * a \; \forall a \in X$

Thus, 0 is the identity element for the given operation *.

An element $a \in X$ is invertible if there exists $b \in X$ such that $a * b = 0 = b * a$.

$$\text{i.e.,} \begin{cases} a+b=0=b+a, & \text{if } a+b<6 \\ a+b-6=0=b+a-6, & \text{if } a+b \geq 6 \end{cases}$$

i.e.,

$a = -b$ or $b = 6 - a$

But, $X = \{0, 1, 2, 3, 4, 5\}$ and $a, b \in X$. Then, $a \neq -b$.

Therefore, $b = 6 - a$ is the inverse of $a \; a \in X$.

Hence, the inverse of an element $a \in X$, $a \neq 0$ is $6 - a$ i.e., $a^{-1} = 6 - a$.
