Chemical Periodicity

ET Self Evaluation Test -15

- If the difference in electronegativities of two elements is very large, then (a) The bond is 50% ionic (b) The bond is 100% covalent (c) The bond is more covalent than ionic
 - (d) The bond is more ionic than covalent Which of the following elements will have the lowest electron affinity
 - (a) Nitrogen

2.

(b) Flourine

(c) Chlorine

- (d) Phosphorus
- The correct order of second ionization potential of 3. carbon, nitrogen, oxygen and fluorine is

[IIT-JEE 1981; CBSE PMT 1991; MADT Bihar 1995;

MP PMT 2003]

(a) C > N > O > F

(b) O > N > F > C

(c) O > F > N > C

- (d) F > O > N > C
- Which of the following species has the highest ionisation potential [EAMCET 1998]

(a) Li^+

(b) Mg^+

(c) Al^+

- (d) Ne
- Which of the following elements are analogous to 5. the lanthanides [AIIMS 1998]

(a) Actinides

(b) Borides

(c) Carbides

- (d) Hydrides
- 6. Which of the order for ionisation energy is correct

[CPMT 1999; CBSE PMT 2001]

(a) Be > B > C > N > O

(b) B < Be < C < O < N

(c) B < Be < C < N < O

(d) B < Be < N < C < O

Modern periodic table is based on the atomic number of the elements. The experiment which proved the significance of the atomic number was [CBSE PMT 1989]

15. In which of the following metal carbonate which

- (a) Millikan's oil drop experiment
- (b) Moseley's work on X -ray spectra
- (c) Bragg's work on X-ray diffraction
- (d) Discovery of X-rays by Rontgen
- 8. Which one of the elements is most metallic

[MP PMT 2002]

(a) P

(b) As

(c) Sb

(d) Bi

For a p - block element, its 3d, 3s, 3p and 4s9. orbitals completely filled differentiating electron goes to the 4p orbital. The element should have its atomic number in the range

(a) 13 - 18

(b) 21 - 26

(c) 31 - 36

(d) 49 - 54

The most common lanthanide is 10.

[AFMC 1995]

(a) Lanthanum

(b) Cerium

(c) Samarium

(d) Plutonium

In a period, elements are arranged in strict 11. sequence of

[CPMT 1989]

- (a) Decreasing charges in the nucleus
- (b) Increasing charges in the nucleus
- (c) Constant charges in the nucleus
- (d) Equal charges in the nucleus
- 12. Some of the polar crystal when heated produce electric current. This phenomena is termed as[AMU 2001]

(a) Ferroelectric effect (b) Phyroelectric effect

(c) Antiferroelectric effect (d)Piezoelectric effect

Which of the following pairs has elements containing same number of electrons in the outermost orbit

[CPMT 1985]

(a) N-O

(b) *Na-Cl*

(c) Ca - Cl

(d) Cl - Br

Coinage metals are present in

[DCE 2000]

(a) s-block

(b) d-block

(c) p-block

(d) f-block

metal carbonate is decomposed on heating[UPSEAT 1999]

(a) $MgCO_3$

(b) Na_2CO_3

(c) K_2CO_3

(d) Pb_2CO_3

Which one of the following is the correct decreasing order of boiling point [AMU 2000]

(a) $H_2O > H_2S > H_2Se > H_2Te$

652 Chemical Periodicity

(b) $H_2Te > H_2Se > H_2S > H_2O$

(d) $H_2Te > H_2O > H_2Se > H_2O$

(c) $H_2O > H_2Te > H_2Se > H_2S$

Answers and Solutions

(SET -15)

- (d) If the difference in electronegativities of two elements is very high then the bond is more ionic than covalent.
- 2. (d) Phosphorus have the lowest electron affinity due to half filled p orbital, but in nitrogen electron affinity is greater than phosphorus because of large nuclear attraction in comparison with phosphorus.
- (c) The ionization potential increases across the 3. period but the second ionization potential of oxygen is highest among them because after the removal of $1e^-$ the $2e^-$ is to be removed from half filled orbital which is difficult.
- (d) As, now the e^- is to be removed from stable 4. configuration. Li⁺ has the highest ionisation potential due to its stability.
- (a) Actinides are homologous of Lanthanides. 5.
- 6. (b) Ionisation energy increases across the period but due to stable half filled configuration of VA group, its I.E. is more than VI-A group.
- (b) Moseley's work on X-ray spectra was proved 7. the significance of the atomic number.

(d) The metallic property of an element increases from top to bottom in group.

- 9. (c) 31- 36 \Rightarrow Ga to Kr.
- 10. (b) The most common lanthanide is cerium.
- 11. (b) Increasing charges in the nucleus as atomic number increases across a period.
- (d) This phenomena is called piezoelectric effect. 12.
- (d) Cl Br. Both belong to VII-A group having $7e^{-}$ 13. in valence shell.
- (b) Copper, Silver and Gold are coinage metals 14.
- 15. (a) $MgCO_3 \rightarrow MgO + CO_2$
- 16. (c) Correct decreasing order of boiling point is, $H_2O > H_2Te > H_2Se > H_2S$.
