## 4 Best Essay on “Knowledge is Power”

### Essay No. 01

The main difference between a man and an animal is that man has some knowledge but an animal has no knowledge of anything.

Knowledge is the godmother of all discoveries, explorations, and inventions. Mostly man gains knowledge through observation and experimentation: At the first man starts with a certain hypothesis of theory and sometimes even without any premeditation, prerequisite or predetermination. In other words, he embarks upon the negative. Einstein, for instance, was actually not working for discovering the atom when he stepped upon it just by chance. Generated in his mind which led to the discovery of the theory of gravitation were not conceived by him.

All the modern technology which has made certain nations so powerful economically and militarily is all based on knowledge. In countries like the USA research in all fields of science is done on regular basis and that is one of the underlying secrets of her success and matchlessness and invulnerability as a nation in the world, at least not to the extent of a crippling effect.

India has also done great research in certain fields, as for instance, in the fields of information technology and telecommunications and she is now reaping a rich harvest for this.

So, in a nutshell, we shall have to agree to what Bacon said four centuries ago that knowledge is power. All human progress and perhaps even man's very existence on the globe depends upon his retention and growth of knowledge in various fields for positive and constructive purposes because if knowledge is used for negative purposes it can play havoc with our life and existence on earth

**Knowledge And Power**

We humans claim to be at the forefront of knowledge and consider ourselves as having a better understanding of our world and its environs than any other creature. This claim of achievement or superiority may not be totally hollow if we consider the progress we have made as a race so far. But how much of the whole do we really know? How has our knowledge been possible?

We recognize our own existence, and that of our environment, with the aid of our senses. Of the five senses, we have two — those of sight and hearing are the ones that link us with the world around us. It is mainly these two senses, and a brain to control and coordinate them, which enables us to acquire knowledge and understanding about everything. How is it that these senses show such versatility as the vastness of our knowledge and abilities indicate? Are we right in assuming the ability of our senses to the extent we do? Is the knowledge that we have acquired with the help of our senses, reliable and precise? Or is our knowledge misleading? It is difficult to give convincing answers to these questions. It may also be that the answers are not always positive or encouraging. Whatever the answers, they are essentially human; from the viewpoint of humans and for the sake of humans. As they can change, with viewpoint and logic, the answers cannot be considered absolute or eternal.

The reliability of our knowledge is further in doubt because the period for which we have been existing as a race is negligibly brief when compared to the age of the Universe, which may be billions of years. Based on the evidence available until now, our existence as a civilized community, eager and inquisitive for knowledge, has been for about six thousand years. It is difficult to believe that we are capable of having known everything in such a short period. Our knowledge, therefore, may have limitations due to our viewpoints, attitudes, and experiences, none of which may be absolutely reliable. This aspect may be explained by the behavior of celestial bodies as seen from the Earth. If we disregard all the knowledge, we have about them, and instead depend solely on observation, it is still possible to believe that the Sun and other heavenly bodies move around the Earth. The belief is so because our viewpoint is on Earth. From elsewhere, the phenomenon will seem different.

Despite its limitations, knowledge is useful to us in a variety of ways. Its importance depends on the way it is used. It has helped, more than anything else, our progress and development, as well as caused changes in our thoughts and attitudes. Knowledge and information, that are capable of clearly and convincingly answering our questions, enable us to be at peace with ourselves and in harmony with our environment.

The confidence and courage that we get from knowledge, are sources of the privilege we enjoy over those who are ignorant. Such privilege and advantage have

mixed uses. While some of the uses of knowledge are beneficial to society, others are not. The numerous scientific discoveries we have made so far are responsible for the comfort and conveniences we enjoy. On the other hand, the use of knowledge by unscrupulous people has brought us to ruin. The phenomenon of global colonialism, which lasted until recently, is a typical example of how knowledge can be used as an instrument to achieve power. It was the superior knowledge of the English, French, Dutch, and Spaniards that helped them keep large sections of the people worldwide, under subjugation, for long periods. Though colonialism has long since ended, the superior knowledge of the advanced countries continues to monopolize societies through the avenues of trade and industry. Knowledge has, therefore, helping those who have it dominate others and influence public opinion. Thus, the key question is whether it is possible to ensure that knowledge is always used for the comprehensive benefit of humanity.

Knowledge should be approached with a balanced mentality, with due recognition for its limitations, and due acknowledgment of its advantages. Rather than think of knowledge as a means to dominate others, it should be thought of as a facility to understand reality, as much as possible. Knowledge serves its purpose best if it leads to more knowledge and a better understanding of the absolute truth; if it ensures the peace, stability, and well-being of humanity, rather than be a cause for destruction.

### **Knowledge is Power**

There is a lot of truth in the idiom, “Knowledge is power.” Knowledge truly empowers us. Knowledge helps us make informed decisions. Knowledge is not necessarily gleaned from books in a classroom. It could come from experience, sometimes it can come from just watching other people’s lives.

We see examples of this idiom everywhere. Whether at work or play it helps to know everything about one’s boss and one’s opponent. Take cricket, for example, it helps the bowler to know Sachin Tendulkar’s weaknesses. If he knows his weaknesses, he will be able to capitalize on them. At work, it pays to know about one’s product. If you know your product only then you can sell it. Yes, no sale can happen without knowledge. The history of our civilization has proven that many wars have been won not on the might of the sword but on the might of knowledge. Knowledge gives you an advantage. It doesn’t matter who you are or what you are doing. All that matters is how much knowledge you have.

It is the knowledge that makes a father stop his son from trying to empty the sea into his little sandcastle moat. Lack of knowledge is what makes the youth brash and it is the knowledge that makes the elderly smart. Knowledge is crucial in any business enterprise. In fact, it is so crucial that it is often equated to common sense. The more you know about who and what you are dealing with, the better off you will be.

Staying well-informed is a daily endeavor that requires both diligence and enthusiasm. With everything around us moving so rapidly it's a challenge to keep up with it, but not to keep up- would be like agreeing to check out. The important thing is to keep learning and assimilating information. You never know when it will come in handy. Donald Trump the legendary investment guru said that if he hadn't studied foreclosures as a kid, he would not have been able to see the great opportunity that led to his first success. So the truth is that any knowledge is power.

With knowledge one's potential increases. Sometimes people are hesitant to share information as they consider that some advantage can be gained through the use or manipulation of knowledge.

What makes us envy the yogis and spiritual gurus? What makes us bow down in front of them in humility? We know that there is something that makes them different from us. What is different about them??? Knowledge!! Yes, they have knowledge of things we do not. That's what makes them different. Knowledge has empowered millions of people. The whole mystery behind the magic was unraveled by science. If it wouldn't have been for scientific knowledge we would still be depending on shamans for cures. The more we learn the more we grow. Knowledge is never wasted. Somehow, someday you will put it to use. Wisdom grows on the strength of knowledge, so we must spend all our lives procuring knowledge.
