## **Lines and Angles**

- 1. A line which intersects two or more given lines at distinct points is called a transversal to the given lines.
- 2. Lines in a plane are parallel if they do not intersect when produced indefinitely in either direction.
- 3. The distance between two intersecting lines is zero.
- 4. The distance between two parallel lines is the same everywhere and is equal to the perpendicular distance between them.
- 5. If two parallel lines are intersected by a transversal then
- (i) pairs of alternate (interior or exterior) angles are equal.
- (ii) pairs of corresponding angles are equal.
- (iii) interior angles on the same side of the transversal are supplementary.
- 6. If two non-parallel lines are intersected by transversal then none of (i), (ii) and (iii) hold true in 5.
- 7. If two lines are intersected by a transversal, then they are parallel if any one of the following is true:
- (i) The angles of a pair of corresponding angles are equal.
- (ii) The angles of a pair of alternate interior angles are equal.
- (iii) The angles of a pair of interior angles on the same side of the transversal are supplementary.
