	Ordinary Thinking		<ul> <li>(b) Root mean square velocity of air molecules inside the bubble increases</li> <li>(a) Decreases in surface tansion of water</li> </ul>
			(d) All of the above
	Objective Questions	12.	The spiders and insects move and run about on the surface of water without cipling because
_	Surface Tension		(a) Elastic membrane is formed on water due to property of
1.	The value of surface tension of a liquid at critical temperature is		sulfattes and a sulfatter and a sulfatter and a sulfatter and a sulfatter sulfatter and a sulfatter sulfatter and a sulfatter
	(a) Zero (b) Infinite		(b) Spiders and insects are lighter
	(c) Between 0 and $\infty$ (d) Can not be determined		(c) Spiders and insects swim on water
2.	The spherical shape of rain-drop is due to		(d) Spider and insects experience upthrust
	[CPMT 1976, 90; NCERT 1982; AIIMS 1998; MH CET 2000; DCE 1999; AFMC 1999; CPMT 2001; AFMC 2001]	13.	Small droplets of a liquid are usually more spherical in shape than larger drops of the same liquid because
	(a) Density of the liquid (b) Surface tension		[EAMCET 1988]
3.	(c) Atmospheric pressure (d) Gravity Surface tension is due to		(a) Force of surface tension is equal and opposite to the force of
	(a) Frictional forces between molecules		(b) Force of surface tension prodominates the force of struits
	(b) Cohesive forces between molecules		(b) Force of surface tension predominates the force of gravity
	(c) Adhesive forces between molecules		(c) Force of gravity predominates the force of surface tension
	(d) Gravitational forces		(d) Force of gravity and force of surface tension act in the same direction and are equal
4.	When there is no external force, the shape of a liquid drop is determined by [CPMT 1988, 86; DPMT 1982]	14.	Hairs of shaving brush cling together when it is removed from water due to
	(a) Surface tension of the liquid		(a) Force of attraction between hair
	(b) Density of liquid		(b) Surface tension
	(c) Viscosity of liquid		(c) Viscosity of water
	(d) Temperature of air only		(d) Characteristic property of bairs
5.	Soap helps in cleaning clothes, because [DPMT 1983, 2001]	15	A square frame of side 1 is diamed in a liquid On taking out a
	<ul><li>(a) Chemicals of soap change</li><li>(b) It increases the surface tension of the solution</li></ul>	15.	A square frame of side L is dipped in a inquid. On taking out, a membrane is formed. If the surface tension of the liquid is <i>T</i> , the force acting on the frame will be
	(c) It absorbs the dirt		[MP PMT 1990: DPMT 2004]
	(d) It lowers the surface tension of the solution		(a) 2 <i>TL</i> (b) 4 <i>TL</i>
6.	A pin or a needle floats on the surface of water, the reason for this		(c) 8 77. (d) 10 77.
	is [MP PET/PMT 1988; CPMT 1975]	16	Water does not wet an oily glass because
	(a) Surface tension (b) Less weight		(a) Cohesive force of oil>> adhesive force between oil and glass
_	(c) Upthrust of liquid (d) None of the above		(b) Cohesive force of oil $>$ cohesive force of water
7.	Coatings used on raincoat are waterproof because		(b) Consider force of on 2 consider force of water
	(a) water is absorbed by the coating		(d) Cohaging force for water a adhesing force between water and
	(b) Consider force becomes greater		oil molecules
	(d) Apple of context degraces	17.	A water drop takes the shape of a sphere in a oil while the oil drop
8	(u) Angle of contact decreases	.,.	spreads in water, because
0.	[MP PMT 1994: EAMCET (Engg.) 1995: RPET 2003]		(a) C.F. for water > A.F. for water and oil
	(a) Increases (b) Decreases		(b) C.E. for oil $> A.E.$ for water and oil
	(c) Remains the same (d) Increases then decreases		(c) $C F$ for oil $< A F$ for water and oil
9.	A drop of oil is placed on the surface of water. Which of the		
	following statement is correct [NCERT 1976; DPMT 1982]		(d) None of the above
	(a) It will remain on it as a sphere		(A.F. = adhesive force C.F. = cohesive force)
	(b) It will spread as a thin layer	18.	Which of the fact is not due to surface tension
	$(c)  \mbox{It will be partly as spherical droplets and partly as thin film }$		(a) Dancing of a camphor piece over the surface of water
	$(d) \;\;$ It will float as a distorted drop on the water surface		(b) Small mercury drop itself becomes spherical
10.	The temperature at which the surface tension of water is zero		(c) A liquid surface comes at rest after stirring
	(a) 0° <i>C</i> (b) 277 <i>K</i>		(d) Mercury does not wet the glass vessel
	(c) $370^{\circ}C$ (d) Slightly less than 647 K	10.	In the glass capillary tube, the shape of the surface of the liquid
11.	A small air bubble is at the inner surface of the bottom of a beaker	• •••	depends upon [MP PMT 1989]

- A small air bubble is at the inner surface of the bottom of a beaker filled with cold water. Now water of the beaker is heated. The size of bubble increases. The reason for this may be
  - (a) Increase in the saturated vapour pressure of water

 $(a) \quad \text{Only on the cohesive force of liquid molecules}$ 

Surface Tension 493

	(b) Only on the adhesive force between the molecules of glass and		$\left( d ight) $ Its variation with the concentration of the liquid
	liquid	31.	When a drop of water is dropped on oil surface, then
	(c) Only on relative cohesive and adhesive force between the atoms		[RPMT 1997]
	(d) Neither on cohesive nor on adhesive force		(a) It will mix up with oil (b) It enreads in the form of a film
20.	Force necessary to pull a circular plate of 5 cm radius from water		(c) It will deform
	surface for which surface tension is 75 <i>dynes/cm,</i> is		(d) It remains spherical
	[MP PMT 1991]	32.	Two pieces of glass plate one upon the other with a little water in
	(a) 30 <i>dyne</i> (b) 60 <i>dynes</i>	-	between them cannot be separated easily because of
	(c) 750 dynes (d) 750 $\pi$ dynes		(a) Inertia (b) Pressure
21	The property of surface tension is obtained in		(c) Surface tension (d) Viscosity
21.	(a) $c_{1}$ (b) $c_{2}$ (b) $c_{2}$ (c) $c_{3}$ (c) $c_{4}$ (c) $c_{2}$ (c) $c_{3}$ (c) $c_{4}$ (c)	33.	Small liquid drops assume spherical shape because
	(a) Solids, liquids and gases (b) Liquids		[JIPMER 1997]
	(c) Gases (d) Matter		(a) Atmospheric pressure exerts a force on a liquid drop (b) Volume of a subgrigal drop is minimum
22.	The surface tension of a liquid [MNR 1990]		(c) Gravitational force acts upon the drop
	(a) Increases with area		(d) Liquid tends to have the minimum surface area due to surface
	(b) Decreases with area		tension
	(c) Increase with temperature	34.	A thin metal disc of radius $r$ floats on water surface and bends the
	(d) Decrease with temperature		surface downwards along the perimeter making an angle $ heta$ with
23.	If two glass plates are quite nearer to each other in water, then		vertical edge of the disc. If the disc displaces a weight of water $W$
	there will be force of		and surface tension of water is 7, then the weight of metal disc is () $2 = T + W$ (1) $2 = T = 0$ W
	(a) Attraction (b) Repulsion		(a) $2\pi r I + W$ (b) $2\pi r I \cos \theta - W$
	(c) Attraction or repulsion (d) None of the above		(c) $2\pi T \cos \theta + W$ (d) $W - 2\pi r T \cos \theta$
24.	On mixing the salt in water, the surface tension of water will	35.	A 10 $cm$ long wire is placed horizontally on the surface of water and
	(a) Increase (b) Decrease		equilibrium. The surface tension, in <i>Nm</i> , of water is
	(c) Remain unchanged (d) None of the above		(a) 0.1 (b) 0.2
<b>0</b> 5	The maximum frame in addition to the unitate maximum frame in addition to the unitate maximum frame.		(c) 0.001 (d) 0.002
25.	wire of 5.0 <i>cm</i> long from the surface of water at temperature 20 C	36.	It is easy to wash clothes in hot water because its
	is 728 <i>dynes.</i> The surface tension of water is	-	[RPMT 2000]
	(a) 7.28 <i>N/cm</i> (b) 7.28 <i>dyne/cm</i>		(a) Surface tension is more
	(c) 72.8 <i>dvne/cm</i> (d) 7.28×10 <i>dvne/cm</i>		(b) Surface tension is less
26.	Consider a liquid contained in a vessel. The liquid solid adhesive		(c) Consumes less soap
	force is very weak as compared to the cohesive force in the liquid.		(d) None of these
	The shape of the liquid surface near the solid shall be	37.	Due to WWN 1994 perty of water, tiny particles of camphor dance on
	(a) Horizontal (b) Almost vertical		the surface of water [RPMT 1999]
	(c) Concave (d) Convex		(a) Viscosity (b) Surface tension
27.	At which of the following temperatures, the value of surface tension		(c) Weight (d) Floating force
	(a) 4: C (b) 25: C	38.	The force required to separate two glass plates of area $10^{-2}m^2$
	(c) $50^{\circ}$ C (d) $75^{\circ}$ C		with a film of water 0.05 mm thick between them, is (Surface
28.	If a glass rod is dipped in mercury and withdrawn out, the mercury		tension of water is $70 \times 10^{-3}$ N/m)
	does not wet the rod because [MP PET 1995]		[КСЕТ 2000; РЬ. РЕТ 2001: RPET 2002]
	(a) Angle of contact is acute		(a) 28 N (b) 14 N
	(b) Cohesion force is more		(c) 50 N (d) 38 N
	(c) Adhesion force is more	39.	Oil spreads over the surface of water whereas water does not spread
20	(a) Density of mercury is more Marcury does not wet glass wood or iron because		[MH CFT 2001]
49.	IMP PET 1997		(a) Surface tension of water is very high
	(a) Cohesive force is less than adhesive force		(b) Surface tension of water is very low
	(b) Cohesive force is greater than adhesive force		(c) Viscosity of oil is high
	(c) Angle of contact is less than $90^{\circ}$		(d) Viscosity of water is high
	(d) Cohesive force is equal to adhesive force	40.	Cohesive force is experienced between [MH CET 2001]
30.	Surface tension of a liquid is found to be influenced by	-	(a) Magnetic substances
	[ISM Dhanbad 1994]		(b) Molecules of different substances
	(a) it increases with the increase of temperature		

- (b) Nature of the liquid in contact
- (c) Presence of soap that increases it

- $(c) \quad \text{Molecules of same substances} \\$
- (d) None of these

41.	The property utilized in the manufacture of lead shots is				
		[AIIMS 2002]			
	(a) Specific weight of liquid lead				
	(b) Specific gravity of liquid lead				
	(c) Compressibility of liquid lead				
	(d) Surface tension of liquid lead				

- 42. The dimensions of surface tension are [MH CET 2002]
  - (a)  $[MLT^{-1}]$  (b)  $[ML^2T^{-2}]$
  - (c)  $[ML^0T^{-2}]$  (d)  $[ML^{-1}T^{-2}]$
- **43.** A wooden stick 2m long is floating on the surface of water. The surface tension of water 0.07 *N/m.* By putting soap solution on one side of the sticks the surface tension is reduced to 0.06 *N/m.* The net force on the stick will be

[Pb. PMT 2002] (a) 0.07 N (b) 0.06 N

- (c) 0.01 N (d) 0.02 N
- **44.** A thread is tied slightly loose to a wire frame as in figure and the frame is dipped into a soap solution and taken out. The frame is completely covered with the film. When the portion *A* punctured with a pin, the thread.

5.

6.

8.

- (a) Becomes concave toward A
- (b) Becomes convex towards A
- (c) Remains in the initial position
- (d) Either (a) or (b) depending on the size of A w.r.t. B
- 45. The force required to take away a flat circular plate of radius 2 *cm* from the surface of water, will be (the surface tension of water is 70 *dyne/cm*) [Pb. PET 2001]
  - (a)  $280\pi \, dyne$  (b)  $250\pi \, dyne$
  - (c)  $140\pi \, dyne$  (d)  $210\pi \, dyne$
- **46.** Surface tension may be defined as **[CPMT 1990]** 
  - (a) The work done per unit area in increasing the surface area of a liquid under isothermal condition
  - (b) The work done per unit area in increasing the surface area of a liquid under adiabatic condition
  - (c) The work done per unit area in increasing the surface area of a liquid under both isothermal and adiabatic conditions
  - (d) Free surface energy per unit volume

## Surface Energy

 Energy needed in breaking a drop of radius *R* into *n* drops of radii *r* is given by [CPMT 1982, 97]

a) 
$$4\pi T(nr^2 - R^2)$$
 (b)  $\frac{4}{3}\pi(r^3n - R^2)$   
c)  $4\pi T(R^2 - nr^2)$  (d)  $4\pi T(nr^2 + R^2)$ 

 The potential energy of a molecule on the surface of liquid compared to one inside the liquid is [MP PMT 1993]

_	_	 _	_		_	_	 _	
-		_	_	_	_	_	_	

- (a) Zero(b) Smaller(c) The same(d) Greater
- **3.** Two droplets merge with each other and forms a large droplet. In this process

# [CBSE PMT 1993; RPMT 1997, 2000; CPMT 2001; BHU 2001; AFMC 2002] (a) Energy is liberated

Surface Tension 495

- (b) Energy is absorbed
- (c) Neither liberated nor absorbed
- (d) Some mass is converted into energy
- A drop of liquid of diameter 2.8 mm breaks up into 125 identical drops. The change in energy is nearly (S.T. of liquid =75 dynes/cm)

(a)	Zero		(b)	19 <i>erg</i>

(c) 46 <i>erg</i> (d)	74 erg
-----------------------	--------

Radius of a soap bubble is 'r', surface tension of soap solution is T. Then without increasing the temperature, how much energy will be needed to double its radius

#### [CPMT 1991; Pb. PMT 2000; RPET 2001]

(a)	$4\pi r^2 T$	(b)	$2\pi r^2 T$
· ·			

- (c)  $12\pi r^2 T$  (d)  $24\pi r^2 T$
- Work done in splitting a drop of water of 1 mm radius into 10<sup>-0</sup> droplets is (Surface tension of water =  $72 \times 10^{-3} J/m^2$ )

#### [MP PET/PMT 1988; CPMT 1989; RPET 2001]

- (a)  $9.58 \times 10^{-5} J$  (b)  $8.95 \times 10^{-5} J$
- (c)  $5.89 \times 10^{-5} J$  (d)  $5.98 \times 10^{-6} J$
- 7. A spherical liquid drop of radius *R* is divided into eight equal droplets. If surface tension is *T*, then the work done in this process will be [CPMT 1990]
  - (a)  $2 \pi R^2 T$  (b)  $3 \pi R^2 T$
  - (c)  $4 \pi R^2 T$  (d)  $2 \pi R T^2$
  - The amount of work done in blowing a soap bubble such that its diameter increases from d to D is (T= surface tension of the solution) [MP PMT 1996]

(a) 
$$4\pi (D^2 - d^2)T$$
 (b)  $8\pi (D^2 - d^2)T$   
(c)  $\pi (D^2 - d^2)T$  (d)  $2\pi (D^2 - d^2)T$ 

- **9.** If *T* is the surface tension of soap solution, the amount of work done in blowing a soap bubble from a diameter *D* to 2*D* is
  - (a)  $2 \pi D^2 T$  (b)  $4 \pi D^2 T$
  - (c)  $6 \pi D^2 T$  (d)  $8 \pi D^2 T$

10. The radius of a soap bubble is increased from  $\frac{1}{\sqrt{\pi}} cm$  to  $\frac{2}{\sqrt{\pi}} cm$ .

If the surface tension of water is 30 *dynes* per *cm*, then the work done will be [MP PMT 1986]

- (a) 180 *ergs* (b) 360 *ergs*
- (c) 720 *ergs* (d) 960 *ergs*
- **11.** The surface tension of a liquid is 5 N/m. If a thin film of the area 0.02 *m* is formed on a loop, then its surface energy will be

(a)	$5 \times 10^2 J$	(b)	$2.5 \times 10^{-2} J$
(c)	$2 \times 10^{-1} J$	(d)	$5 \times 10^{-1} J$

- If work W is done in blowing a bubble of radius R from a soap 12. solution, then the work done in blowing a bubble of radius 2R from the same solution is [MP PET 1990]
  - (a) W/2 (b) 2W

(d)  $2\frac{1}{2}W$ (c) 4W

A spherical drop of oil of radius 1 cm is broken into 1000 droplets of 13. equal radii. If the surface tension of oil is 50 dynes/cm, the work done is [MP PET 1990] (1) 190 (1) 18

(a)	18 n ergs	(B)	$180 \pi \ ergs$

- (d) 8000 π ergs (c) 1800  $\pi$  ergs
- The work done in blowing a soap bubble of radius r of the solution 14. of surface tension *T* will be

 $(1) \circ 2\pi$ 

[DPMT 1999; MP PMT 2003]

21.

22.

23.

24.

(a) 
$$8\pi r I$$
 (b)  $2\pi r I$   
(c)  $4\pi r^2 T$  (d)  $\frac{4}{3}\pi r^2 T$ 

 $() \quad 0 \quad 2\pi$ 

- If two identical mercury drops are combined to form a single drop, 15. [RPET 2000] then its temperature will
  - (a) Decrease (b) Increase
  - (c) Remains the same (d) None of the above
- If the surface tension of a liquid is T, the gain in surface energy for 16. an increase in liquid surface by A is

[MP PET 1991; RPMT 2002]

(a) 
$$AT^{-1}$$
 (b)  $AT$   
(c)  $A^2T$  (d)  $A^2T^2$ 

The surface tension of a soap solution is  $2 \times 10^{-2} N/m$ . To blow a 17. bubble of radius 1 cm, the work done is

[MP PMT 1989]

(a)	$4\pi \times 10^{-6} J$	(b)	$8\pi  imes 10^{-6} J$
(c)	$12\pi \times 10^{-6} J$	(d)	$16\pi \times 10^{-6} J$

A mercury drop of 1 cm radius is broken into  $10^6$  small drops. The 18. energy used will be (surface tension of mercury is  $35 \times 10^{-3} N/cm$ [Roorkee 1984]

(a) 
$$4.4 \times 10^{-3} J$$
 (b)  $2.2 \times 10^{-4} J$ 

(c) 
$$8.8 \times 10^{-4} J$$
 (d)  $10^4 J$ 

The surface tension of a liquid at its boiling point 19.

(a) Becomes zero

- (b) Becomes infinity
- (c) is equal to the value at room temperature
- (d) is half to the value at the room temperature
- Surface tension of a soap solution is  $1.9 \times 10^{-2} \, N \, / \, m.$  . Work done 20. in blowing a bubble of 2.0 cm diameter will be

[MP PMT 1991]

[MP PMT 1980]

- (a)  $7.6 \times 10^{-6} \pi$  joule (b)  $15.2 \times 10^{-6} \pi$  joule
- (c)  $1.9 \times 10^{-6} \pi$  joule (d)  $1 \times 10^{-4}$  joule

(c)  $4 \times 10^{\circ}$  joule (d)  $0.8 \times 10^{\circ}$  joule What is ratio of surface energy of 1 small drop and 1 large drop, if 1000 small drops combined to form 1 large drop [CPMT 1990] (a) 100 : 1 (b) 1000 : 1 (d) 1:100 (c) 10:1 The amount of work done in forming a soap film of size  $10 \, cm \times 10 \, cm$  is (Surface tension  $T = 3 \times 10^{-2} \, N/m$ ) [MP PET 1994; MP PET 2000] (a)  $6 \times 10^{-4} J$ (b)  $3 \times 10^{-4} J$ (c)  $6 \times 10^{-3} J$ (d)  $3 \times 10^{-4} J$ The work done in blowing a soap bubble of 10 cm radius is (Surface tension of the soap solution is  $\frac{3}{100} N/m$  ) [MP PMT 1995; MH CET 2002]

The surface tension of liquid is 0.5 N/m. If a film is held on a ring of

(b)  $2.0 \times 10^{\circ}$  joule

area 0.02 *m*, its surface energy is [CPMT 1977]

(a)  $5 \times 10^{\circ}$  joule

- (a)  $75.36 \times 10^{-4}$  joule (b)  $37.68 \times 10^{-4}$  joule
- (c)  $150.72 \times 10^{-4}$  joule (d) 75.36 joule
- A liquid drop of diameter D breaks upto into 27 small drops of 25. equal size. If the surface tension of the liquid is  $\sigma$ , then change in surface energy is [DCE 2005]

(a) 
$$\pi D^2 \sigma$$
 (b)  $2\pi D^2 \sigma$ 

(c) 
$$3\pi D^2 \sigma$$
 (d)  $4\pi D^2 \sigma$ 

- 26. One thousand small water drops of equal radii combine to form a big drop. The ratio of final surface energy to the total initial surface [MP PET 1997; KCET 1999] energy is
  - (a) 1000 : 1 (b) 1:1000
  - (c) 10:1 (d) 1:10
- The work done in increasing the size of a soap film from 10  $cm \times 6$ 27. *cm* to 10 *cm*  $\times$  11 *cm* is 3  $\times$ 10<sup>+</sup> *joule*. The surface tension of the film is

# [MP PET 1999; JIPMER 2001, 02;

- MP PMT 2000; AllMS 2000]
- (a)  $1.5 \times 10^{-2} N/m$ (b)  $3.0 \times 10^{-2} N/m$

(c) 
$$6.0 \times 10^{-2} N/m$$
 (d)  $11.0 \times 10^{-2} N/m$ 

- 28. If  $\sigma$  be the surface tension, the work done in breaking a big drop of radius R in n drops of equal radius is
  - [Bihar CEET 1995]
  - (d)  $4\pi R^2 (n^{1/3} 1)\sigma$ (c)  $(n^{1/3} - 1)R\sigma$

(e)  $\frac{1}{n^{1/3}-1}\sigma R$ 

A big drop of radius R is formed by 1000 small droplets of water, 29. then the radius of small drop is

#### [AFMC 1998; Pb. PMT 2000]

(a) *R*/2 (b) *R*/5

- (a)  $Rn^{2/3}\sigma$ (b)  $(n^{2/3} - 1)R\sigma$

	(c) <i>R</i> /6 (d) <i>R</i> /10		(
30.	When $10^6$ small drops coalesce to make a	new larger drop then	,
	the drop	[RPMT 1999] 39.	
	(a) Density increases	39.	
	(b) Density decreases		
	(c) Temperature increases		
	(d) Temperature decreases		
31.	Which of the following statements are true in drops coalesce and make a bigger drop	case when two water <b>40</b> .	
		[Roorkee 1999]	:
	(a) Energy is released		
	(b) Energy is absorbed		
	(c) The surface area of the bigger drop is gr the surface areas of both the drops	reater than the sum of	
	(d) The surface area of the bigger drop is sn the surface areas of both the drops	naller than the sum of <b>41.</b>	i
32.	8000 identical water drops are combined to for ratio of the final surface energy to the initial su drops together is	m a big drop. Then the Irface energy of all the [EAMCET (Engg.) 2000]	
	(a) 1:10 (b) 1:15		
	(c) 1:20 (d) 1:25	42.	
3.	The surface energy of liquid film on a ring	of area $0.15 m^2$ is	
	(Surface tension of liquid = $5Nm^{-1}$ )		
		[EAMCET (Engg.) 2000]

	(c) 90°	(d) 0°

## Pressure Difference

A soap bubble assumes a spherical surface. Which of the following [NCERT 1976] statement is wrong (a) The soap film consists of two surface layers of molecules back to back (b) The bubble encloses air inside it (c) The pressure of air inside the bubble is less than the atmospheric pressure; that is why the atmospheric pressure has compressed it equally from all sides to give it a spherical shape (d) Because of the elastic property of the film, it will tend to shrink to as small a surface area as possible for the volume it has enclosed If two soap bubbles of different radii are in communication with 2 each other [NCERT 1980; MP PMT/PET 1988; AIEEE 2004] (a) Air flows from larger bubble into the smaller one (b) The size of the bubbles remains the same (c) Air flows from the smaller bubble into the large one and the charger hubble grows at the expense of the smaller one (d) The air flows from the larger

The surface tension of soap solution is  $25 \times 10^{-3} Nm^{-1}$ . The 3. excess pressure inside a soap bubble of diameter 1 cm is

- (a) 10 Pa (b) 20 Pa
- (c) 5 Pa (d) None of the above

When two soap bubbles of radius  $r_1$  and  $r_2$  ( $r_2 > r_1$ ) coalesce, the radius of curvature of common surface is

#### [MP PMT 1996]

(a) 
$$r_2 - r_1$$
 (b)  $\frac{r_2 - r_1}{r_1 r_2}$ 

(c) 
$$\frac{r_1 r_2}{r_2 - r_1}$$
 (d)  $r_2 + r_1$ 

The excess pressure due to surface tension in a spherical liquid drop of radius *r* is directly proportional to

(a) 1:3 (b) 1:9 (c) 27:1 (d) 1:27

## Capillarity

- When two capillary tubes of different diameters are dipped vertically, the rise of the liquid is [NCERT 1978]
  - (a) Same in both the tubes
  - (b) More in the tube of larger diameter
  - (c) Less in the tube of smaller diameter
  - (d) More in the tube of smaller diameter
- 2. Due to capillary action, a liquid will rise in a tube, if the angle of contact is [DPMT 1984; AFMC 1988; BHU 2001]
  - (a) Acute (b) Obtuse
  - (c) 90° (d) Zero
  - . In the state of weightlessness, a capillary tube is dipped in water, then water
    - (a) Will not rise at all
    - (b) Will rise to same height as at atmospheric pressure
    - (c) Will rise to less height than at atmospheric pressure
    - (d) Will rise up to the upper end of the capillary tube of any length
- 4. Two parallel glass plates are dipped partly in the liquid of density 'd keeping them vertical. If the distance between the plates is 'x', surface tension for liquids is T and angle of contact is θ, then rise of liquid between the plates due to capillary will be

(a) 
$$\frac{T\cos\theta}{xd}$$
 (b)  $\frac{2T\cos\theta}{xdg}$ 

(c) 
$$\frac{2T}{xdg\cos\theta}$$
 (d)  $\frac{T\cos\theta}{xdg}$ 

Water rises in a capillary tube to a certain height such that the upward force due to surface tension is balanced by  $75 \times 10^{-4} N$  force due to the weight of the liquid. If the surface tension of water is  $6 \times 10^{-2} Nm^{-1}$ , the inner circumference of the capillary must be **[CPMT 19**]

- (a)  $1.25 \times 10^{-2} m$  (b)  $0.50 \times 10^{-2} m$
- (c)  $6.5 \times 10^{-2} m$  (d)  $12.5 \times 10^{-2} m$
- **6.** It is not possible to write directly on blotting paper or newspaper with ink pen
  - (a) Because of viscosity (b) Because of inertia
  - (c) Because of friction (d) Because of capillarity
- Two capillary tubes *P* and *Q* are dipped in water. The height of water level in capillary *P* is 2/3 to the height in *Q* capillary. The ratio of their diameters is [MP PMT 1985]
  - (a) 2:3 (b) 3:2
  - (c) 3:4 (d) 4:3

Gritical Thinking

# Objective Questions

- There is a horizontal film of soap solution. On it a thread is placed in the form of a loop. The film is pierced inside the loop and the thread becomes a circular loop of radius R. If the surface tension of the loop be T, then what will be the tension in the thread
- (a)  $\pi R^2 / T$  (b)  $\pi R^2 T$
- (c)  $2\pi RT$  (d) 2RT

2.

A large number of water drops each of radius *r* combine to have a drop of radius *R*. If the surface tension is *T* and the mechanical equivalent of heat is *J*, then the rise in temperature will be [MP PET 1994; DPMT 2002]

(a) 
$$\frac{2T}{rJ}$$
 (b)  $\frac{3T}{RJ}$ 

(c) 
$$\frac{3T}{J}\left(\frac{1}{r}-\frac{1}{R}\right)$$
 (d)  $\frac{2T}{J}\left(\frac{1}{r}-\frac{1}{R}\right)$ 

Surface Tension 503

3. An air bubble in a water tank rises from the bottom to the top. Which of the following statements are true

#### [Roorkee 2000]

- Bubble rises upwards because pressure at the bottom is less (a) than that at the top.
- Bubble rises upwards because pressure at the bottom is greater (b) than that at the top.
- As the bubble rises, its size increases (c)
- (d) As the bubble rises, its size decreases
- In a surface tension experiment with a capillary tube water rises 4. upto 0.1 m. If the same experiment is repeated on an artificial satellite, which is revolving around the earth, water will rise in the capillary tube upto a height of

[Roorkee 1992]

1.

- (a) 0.1 m
- (b) 0.2 *m*
- 0.98 m (c)
- (d) Full length of the capillary tube

The correct curve between the height or depression h of liquid in a capillary tube and its radius is

2. A soap bubble is blown with the help of a mechanical pump at the mouth of a tube. The pump produces a certain increase per minute in the volume of the bubble, irrespective of its internal pressure. The graph between the pressure inside the soap bubble and time twill be-

Which graph represents the variation of surface tension with temperature over small temperature ranges for water

з.

# Assertion & Reason

## For AIIMS Aspirants

Read the assertion and reason carefully to mark the correct option out of the options given below:

- If both assertion and reason are true and the reason is the correct (a) explanation of the assertion.
- *(b)* If both assertion and reason are true but reason is not the correct explanation of the assertion.
- (c) If assertion is true but reason is false.
- (d) If the assertion and reason both are false.
- (e) If assertion is false but reason is true.

Assertion	:	It is easier to spray water in which some soap is	5
		dissolved.	

	Reason	:	Soap is easier to spread.
2.	Assertion	:	It is better to wash the clothes in cold soap solution.
	Reason	:	The surface tension of cold solution is more than the surface tension of hot solution.
3.	Assertion	:	When height of a tube is less than liquid rise in the capillary tube, the liquid does not overflow.
	Reason	:	Product of radius of meniscus and height of liquid in capillary tube always remains constant.
4.	Assertion	:	A needle placed carefully on the surface of water may float, whereas a ball of the same material will always sink.
	Reason	:	The buoyancy of an object depends both on the material and shape of the object.
5.	Assertion	:	A large force is required to draw apart normally two glass plates enclosing a thin water film.
	Reason	:	Water works as glue and sticks two glass plates.
6.	Assertion	:	The impurities always decrease the surface tension of a liquid.
	Reason	:	The change in surface tension of the liquid depends upon the degree of contamination of the impurity.
7.	Assertion	:	The angle of contact of a liquid decrease with increase in temperature.

	Reason	:	With increase in temperature, the surface tension of liquid increase.
8.	Assertion	:	The concept of surface tension is held only for liquids.
	Reason	:	Surface tension does not hold for gases.
9.	Assertion	:	At critical temperature, surface tension of a liquid becomes zero.
	Reason	:	At this temperature, intermolecular forces for liquids and gases become equal. Liquid can expand without any restriction.
10.	Assertion	:	A large soap bubble expands while a small bubble shrinks, when they are connected to each other by a capillary tube.
	Reason	:	The excess pressure inside bubble (or drop) is inversely proportional to the radius.
11.	Assertion	:	Tiny drops of liquid resist deforming forces better than bigger drops.
	Reason	:	Excess pressure inside a drop is directly proportional to surface tension.
12.	Assertion	:	The water rises higher in a capillary tube of small diameter than in the capillary tube of large diameter.
	Reason	:	Height through which liquid rises in a capillary tube is inversely proportional to the diameter of the capillary tube.
13.	Assertion	:	Hot soup tastes better than the cold soup.
	Reason	:	Hot soup has high surface tension and it does not spread properly on our tongue.
14.	Assertion	:	The shape of a liquid drop is spherical.
	Reason	:	The pressure inside the drop is greater than that of outside.

- **38.** (a) Force required to separate the plates

$$F = \frac{2TA}{t} = \frac{2 \times 70 \times 10^{-3} \times 10^{-2}}{0.05 \times 10^{-3}} = 28N$$

**39.** (a)

40. (c) The cohesive force is the force of attraction between the molecules of same substance.

**41.** (d)

42. (c) 
$$T = \frac{F}{l} = \frac{[MLT^{-2}]}{[L]} = [ML^0 T^{-2}]$$
  
43. (d) Net force on stick =  $F_1 - F_2 = (T_1 - T_2)l$   
 $= (0.07 - 0.06)l = 0.01 \times 2 = 0.02N$ 

**45.** (a) Force required,  $F = 2\pi r T = 2\pi \times 2 \times 70 = 280\pi$ . *Dyne* **46.** (a)

# **Surface Energy**

- (a) Energy needed = Increment in surface energy
  - = (surface energy of *n* small drops) (surface energy of one big drop)

$$= n4\pi r^2 T - 4\pi R^2 T = 4\pi T(nr^2 - R^2)$$

2.

3.

8.

(d)

1.

(a) When two droplets merge with each other, their surface energy decreases.

 $W = T(\Delta A) = (negative)$  *i.e.* energy is released.

4. (d) 
$$E = 4\pi R^2 T(n^{1/3} - 1)$$

= 
$$4 \times 3.14 \times (1.4 \times 10^{-1})^2 \times 75(125^{1/3} - 1) = 74 \ erg$$

5. (d) 
$$W = 8\pi T (R_2^2 - R_1^2) = 8\pi T [(2r)^2 - (r)^2] = 24\pi r^2 T$$

6. (b) Work done in splitting a water drop of radius *R* into *n* drops of equal size = 
$$4\pi R^2 T(n^{1/3} - 1)$$
  
=  $4\pi \times (10^{-3})^2 \times 72 \times 10^{-3} \times (10^{6/3} - 1)$ 

$$=4\pi \times 10^{-6} \times 72 \times 10^{-3} \times 99 = 8.95 \times 10^{-5} J$$

7. (c) 
$$W = 4\pi R^2 T (r^{1/3} - 1) = 4\pi R^2 T (8^{1/3} - 1) = 4\pi R^2 T$$

(d) 
$$W = T \times 8\pi (r_2^2 - r_1^2) = T \times 8\pi \left(\frac{D^2}{4} - \frac{d^2}{4}\right)$$

$$=2\pi(D^2-d^2)T$$

**9.** (c) Work done to increase the diameter of bubble from 
$$d$$
 to  $D$ 

$$W = 2\pi (D^2 - d^2)T = 2\pi \left[ (2D)^2 - (D)^2 \right]T = 6\pi D^2 T$$

10. (c) 
$$W = 8 \pi T (r_2^2 - r_1^2) = 8 \pi T \left[ \left( \frac{2}{\sqrt{\pi}} \right)^2 - \left( \frac{1}{\sqrt{\pi}} \right)^2 \right]$$
  
 $\therefore W = 8 \times \pi \times 30 \times \frac{3}{\pi} = 720 \ erg$ 

**11.** (c) 
$$W = T \times \Delta A = 5 \times 2 \times (0.02)$$
 (Film has two free surfaces)

$$= 2 \times 10^{-1} J$$

12. (c) 
$$W = 8\pi R^2 T$$
  $\therefore$   $W \propto R^2$  (*T* is constant)

If radius becomes double then work done will become four times.

13. (c) 
$$W = 4\pi R^2 T(n^{1/3} - 1) = 4\pi \times 1 \times 50(10^{3/3} - 1)$$

= 
$$1800\pi \ erg$$

- (b) Surface energy of combined drop will be lowered, so excess 15. surface energy will raise the temperature of the drop. 16. (b) Surface energy = surface tension × increment in area  $= T \times A$ (d)  $W = 8\pi R^2 T = 8 \times \pi \times (10^{-2})^2 \times 2 \times 10^{-2} = 16\pi \times 10^{-6} J$ 17.  $E = 4\pi R^2 T (n^{1/3} - 1)$ (a) 18.  $= 4 \times 3.14 \times 10^{-4} \times 35 \times 10^{-1} (10^{6/3} - 1) = 4.4 \times 10^{-3} J$ (a) 19. (b)  $W=8\pi R^2 T = 8\pi \times (1 \times 10^{-2})^2 \times 1.9 \times 10^{-2} = 15.2 \times 10^{-6} \pi J$ 20. Surface energy =  $T \times \Delta A = 0.5 \times 2 \times (0.02) = 2 \times 10^{-2} J$ 21. (b) Volume of liquid remain same *i.e.* volume of 1000 small drops 22. (d) will be equal to volume of one big drop  $n\frac{4}{2}\pi r^3 = \frac{4}{2}\pi R^3 \Longrightarrow 1000r^3 = R^3 \Longrightarrow R = 10r \therefore \frac{r}{R} = \frac{1}{10}$  $\frac{\text{surface energy of one small drop}}{\text{surface energy of one big drop}} = \frac{4\pi r^2 T}{4\pi R^2 T} = \frac{1}{100}$ (a)  $E = T \times \Delta A = 3 \times 10^{-2} \times 2(100 \times 10^{-4}) = 6 \times 10^{-4} J$ 23. (a)  $W = 8\pi R^2 T = 8 \times 3.14 \times (10 \times 10^{-2}) \times \frac{3}{100}$ 24.  $=7.536 \times 10^{-3} J$ (b) Work done =  $4\pi R^2 T(n^{1/3} - 1) = 4\pi \left(\frac{D}{2}\right)^2 \sigma(n^{1/3} - 1)$ 25.  $=\pi D^2 \sigma (27^{1/3} - 1) = 2\pi D^2 \sigma$ (d) As volume remain constant therefore  $R = n^{1/3}r$ 26.  $\frac{\text{surface energy of one big drop}}{\text{surface energy of } n \text{ drop}} = \frac{4\pi R^2 T}{n \times 4\pi r^2 T}$  $\frac{R^2}{nr^2} = \frac{n^{2/3}r^2}{nr^2} = \frac{1}{n^{1/3}} = \frac{1}{(1000)^{1/3}} = \frac{1}{10}$ (b)  $W = T \times \Delta A$   $\therefore$   $T = \frac{W}{\Delta A}$ 27.  $T = \frac{3 \times 10^{-4}}{2 \times (110 - 60) \times 10^{-4}}$  (Soap film has two surfaces)  $= 3 \times 10^{-2} N / m$ 28. (d) (d)  $\frac{4}{3}\pi R^3 = 1000 \times \frac{4}{3}\pi r^3$  (As volume remains constant) 29.  $R^3 = 1000r^3 \Rightarrow R = 10r \Rightarrow r = \frac{R}{10}$
- (c) Because energy is liberated 30.
- (a,d) 31.

(c) As volume remains constant  $R^3 = 8000r^3$   $\therefore R = 20r$ 32.

> Surface energy of one big drop  $4\pi R^2 T$  $\frac{1}{\text{Surface energy of 8000 small drop}} = \frac{1}{8000 4\pi r^2 T}$

$$=\frac{R^2}{8000r^2}=\frac{(20r)^2}{8000r^2}=\frac{1}{20}$$

**33.** (b) Surface energy = 
$$T \times A = 5 \times 2 \times (0.15) = 1.5 J$$

**34.** (c) As volume remains constant therefore 
$$R = n^{1/3}$$

Energy of big drop  
Energy of small drop = 
$$\frac{4\pi R^2 T}{4\pi r^2 T} = \frac{R^2}{r^2} = (8)^{2/3} = 4$$

**35.** (a) 
$$T = \frac{W}{\Delta A} = \frac{2 \times 10^{-4}}{2 \times (50 \times 10^{-4})} = 2 \times 10^{-2} \ N/m$$

**36.** (a) 
$$W = T\Delta A = 4\pi R^2 T(n^{1/3} - 1)$$

$$= 4 \times 3.14 \times (10^{-2})^2 \times 460 \times 10^{-3} \times [(10^6)^{1/3} - 1] = 0.057$$

4

38. (b) Increment in area of soap film =  $A_2 - A_1$ 

$$= 2 \times [(10 \times 0.6) - (10 \times 0.5)] \times 10^{-4} = 2 \times 10^{-4} m^2$$

Work done =  $T \times \Delta A$ 

 $=7.2 \times 10^{-2} \times 2 \times 10^{-4} = 1.44 \times 10^{-5} J$ 

39. (a) Increase in surface energy or work done in splitting a big drop  $=4\pi R^2 T(n^{1/3}-1)$ 

$$\Rightarrow W = 4\pi \times (2 \times 10^{-3})^2 \times 0.465(8^{1/3} - 1) = 23.4 \ \mu J$$

 $(b) \;\;$  The ratio of the total surface energies before and after the 40. change  $= n^{1/3} : 1 = 2^{1/3} : 1$ 

**a**. (a) 
$$W = 8\pi S(R_2^2 - R_1^2) = 8\pi S[(2R)^2 - R^2] = 24\pi R^2 S$$

- $W = 8\pi r^2 \times T = 8\pi \times (0.2)^2 \times 0.06 = 192\pi \times 10^{-4} J$ (a) 42.
- (b) Increment in Potential energy =  $T \times \Delta A$ 43

$$= 0.02 \times 2 \times 0.05 = 2 \times 10^{-2}$$
 J

**44.** (a) 
$$E = T \times \Delta A = 75 \times 0.04 = 3 J$$

**45.** (c) 
$$r = \frac{r_1 r_2}{r_2 - r_1} = \infty \text{ since } r_1 = r_2$$

## Angle of Contact

(b)

1. 2.

3.

(a)

- (b) Cohesive force decreases so angle of contact decreases.
- (d) 4.

- 11. (a)
- 12. (c)
- **13.** (b)
- 14. (b) Since for such liquid (Non-wetting) angle of contact is obtuse.

**15.** (b) Both liquids water and alcohol have same nature (*i.e.* wet the solid). Hence angle of contact for both is acute.

 (d) Tangent drawn at point of contact makes 0° with wall of container.

# **Pressure Difference**

1. (c)

**2.** (c) Since  $\Delta P \propto \frac{1}{R}$ 

**3.** (b) Excess pressure  $\Delta P = \frac{4T}{r}$ 

$$=\frac{4\times2\times25\times10^{-3}}{1\times10^{-2}}=20 \ N/m^2=20 \ Pa \ (\text{as } r=d/2)$$

- **4.** (c)
- 5. (c)

**6.** (c) 
$$hdg = \frac{2T}{r} \Rightarrow h = \frac{2T}{rdg}$$

7. (b) 
$$\Delta P = \frac{4T}{r} = 40 N/m^2$$

9. (b) 
$$\Delta P = \frac{4T}{r} = hdg \Rightarrow T = \frac{rhdg}{4} = \frac{0.35 \times 0.8 \times 1 \times 10^3}{4}$$

## $=70 \ dyne/cm \equiv 68.66 \ dyne/cm$

**10.** (c) Outside pressure = 1 *atm* 

Excess pressure  $\Delta P_1 = 1.01 - 1 = 0.01 \text{ atm}$ 

Excess pressure 
$$\Delta P_2 = 1.02 - 1 = 0.02$$
 atm

$$\Delta P \propto \frac{1}{r} \Longrightarrow r \propto \frac{1}{\Delta P} \Longrightarrow \frac{r_1}{r_2} = \frac{\Delta P_2}{\Delta P_1} = \frac{0.02}{0.01} = \frac{2}{1}$$

Since 
$$V = \frac{4}{3} \pi r^3$$
  $\therefore \frac{V_1}{V_2} = \left(\frac{r_1}{r_2}\right)^3 = \left(\frac{2}{1}\right)^3 = \frac{8}{1}$ 

(b)  $S = \frac{rhdg}{2\cos\theta} \Rightarrow$  Pressure difference  $= hdg = \frac{2S}{r}\cos\theta$ 

12. (c)

13. (c) Excess pressure inside soap bubble is inversely proportional to the radius of bubble *i.e.*  $\Delta P \propto \frac{1}{r}$ 

This means that bubbles A and C posses greater pressure inside it than B. So the air will move from A and C towards B.

14. (c) 
$$P_1V_1 = P_2V_2 \implies (H+h)\rho g \times \frac{4}{3}\pi r^3 = H \times \frac{4}{3}\pi (2r)^3$$
  
 $\implies H+h=8H \therefore h=7H$   
15. (c)  $r = \sqrt{r_1^2 + r_2^2} = \sqrt{9+16} = 5 \ cm$ 

**16.** (c) 
$$P_1 V_1 = P_2 V_2 \Rightarrow (H_{Hg} \rho_{Hg} + H_W \rho_W) V = H_{Hg} \rho_{Hg} \times 3V$$

$$\Rightarrow H_{Hg}\rho_{Hg} + H_W \frac{\rho_{Hg}}{10} = 3H_{Hg}\rho_{Hg}$$
$$\Rightarrow H_W = 2H_{Hg} \times 10 = \frac{2 \times 75 \times 10}{100} = 15m$$

17. (a) 
$$\Delta P = \frac{4T}{r} \Rightarrow \frac{\Delta P_1}{\Delta P_2} = 4$$
  $\therefore \frac{r_2}{r_1} = 4$  and  $\frac{V_1}{V_2} = \left(\frac{r_1}{r_2}\right)^3 = \frac{1}{64}$ 

**18.** (b) 
$$\Delta P \propto \frac{1}{r}$$

**19.** (b) Pressure at half the depth 
$$= P_0 + \frac{h}{2}dg$$

Pressure at the bottom 
$$= P_0 + hdg$$

According to given condition

$$P_0 + \frac{h}{2}dg = \frac{2}{3}(P_0 + hdg)$$

$$\Rightarrow 3P_0 + \frac{3h}{2}dg = 2P_0 + 2hdg$$

$$\Rightarrow h = \frac{2P_0}{dg} = \frac{2 \times 10^5}{10^3 \times 10} = 20 m$$

**20.** (a) 
$$\Delta P \propto \frac{1}{r} \Rightarrow \frac{\Delta P_1}{\Delta P_2} = \frac{r_2}{r_1} = \frac{r}{4r} = \frac{1}{4}$$

**21.** (c) 
$$\Delta P = \frac{2T}{R} = \frac{2 \times 70 \times 10^{-3}}{1 \times 10^{-3}} = 140 N/m^2$$

**22.** (c) 
$$P = h\rho g$$

**24.** (b) 
$$r = \frac{r_1 r_2}{r_1 - r_2} = \frac{5 \times 4}{5 - 4} = 20 \ cm$$

**25.** (c) Excess pressure inside the air bubble  $=\frac{2T}{r}$ 

$$\Rightarrow P_{in} - P_{out} = \frac{2T}{r} = \frac{2 \times 70 \times 10^{-3}}{0.1 \times 10^{-3}} = 1400 Pa$$
$$\Rightarrow P_{in} = 1400 + 1.013 \times 10^{5} = 1.027 \times 10^{5} Pa$$

**26.** (a)  $r_A > r_B$  and  $P \propto \frac{1}{r}$  so  $P_A < P_B$ 

So air will flow from *B* to *A i.e.* size of *A* will increase.

**27.** (a) 
$$\Delta P = \frac{4T}{R} \therefore \Delta P \propto \frac{1}{R}$$
 (*T* = constant)

Hence, the internal pressure of smaller bubble is larger than that of larger bubble.  $% \left( {{{\left( {{{{{\bf{n}}}} \right)}_{{{\bf{n}}}}}} \right)_{{{\bf{n}}}}} \right)$ 

**28.** (b) 
$$\frac{4T}{R} = hdg$$
  $\therefore$   $T = \frac{Rhdg}{4}$ 

$$T = \frac{10^{-2} \times 2 \times 10^{-5} \times 0.8 \times 10^{-5} \times 9.8}{4} = 3.9 \times 10^{-2} N/m$$

**29.** (a)

**30.** (d) 
$$\Delta P \propto \frac{1}{r} \Rightarrow \frac{r_1}{r_2} = \frac{\Delta P_2}{\Delta P_1} = \frac{1}{3} \Rightarrow \frac{V_1}{V_2} = \left(\frac{r_1}{r_2}\right)^3 = \frac{1}{27}$$

Capillarity

**1.** (d) 
$$h = \frac{2T\cos\theta}{rdg}$$
 :  $h \propto \frac{1}{r}$  (*T*, $\theta$ , *d* and *g* are constant)

If r is less then h will be more.

**2.** (a) 
$$h = \frac{2T\cos\theta}{rdg}$$
. If  $\theta$  is less than 90° then *h* will be positive

 (d) In the state of weightlessness or in gravity free space, water will rise to the upper end of the tube of any length.

**4.** (b)

Let the width of each place is b and due to surface tension liquid will rise up to height h then upward force due to surface tension

$$= 2Tb\cos\theta$$
 ...(i)

Weight of the liquid rises in between the plates

$$= Vdg = (bxh)dg \qquad ...(ii)$$

Equating (i) and (ii) we get ,  $2T\cos\theta=bxhdg$ 

$$\therefore h = \frac{2T\cos\theta}{xdg}$$

**5.** (d)  $6 \times 10^{-2} \times \text{Circumference} = \text{Force}$ 

:. Circumference 
$$=\frac{75 \times 10^{-4}}{6 \times 10^{-2}} = 12.5 \times 10^{-2} m$$

7. (b) 
$$r \propto \frac{1}{h} \Rightarrow \frac{r_P}{r_Q} = \frac{h_Q}{h_P} = \frac{h}{\frac{2}{3}h} = \frac{2}{3}$$

8. (c) 
$$r \propto \frac{1}{h} \Rightarrow \frac{r_1}{r_2} = \frac{h_2}{h_1} = \frac{6.6}{2.2} = \frac{3}{1}$$

**9.** (c) 
$$\frac{h_2}{h_1} = \frac{r_1}{r_2} = \frac{1}{2} \Longrightarrow h_2 = \frac{30}{2} = 15cm$$

(b)

11.

12.

(d) 
$$h = \frac{2T}{rdg} = \frac{2 \times 75}{0.005 \times 1 \times 10^3} = 30 cm$$

13. (c) 
$$T = \frac{rh\rho g}{2} \Rightarrow 75 \times 10^{-3} = \frac{3 \times 10^{-2} \times r \times 10^{3} \times 9.8}{2}$$
$$\Rightarrow r = \frac{1}{2}mm \therefore D = 2r = 1 mm$$

- (c) The angle of contact of mercury with glass is obtuse. So it gets depressed below the liquid level outside.
- **15.** (d) The water rises to height h due to capilarity.
- **16.** (b)  $h \propto \frac{1}{r}$

**17.** (b) 
$$h = \frac{2T}{rdg} = \frac{2 \times 6 \times 10^{-2}}{5 \times 10^{-4} \times 10^3 \times 10} = 2.4 \times 10^{-2} m = 2.4 cm$$

**18.** (b) 
$$h \propto \frac{1}{r}$$
 :  $r_1 h_1 = r_2 h_2 \Rightarrow \frac{h_1}{h_2} = \frac{r_2}{r_1} = \frac{0.4}{0.2} = 2:1$ 

**19.** (b)

Vertical height of the water in the tube remains constant

So, 
$$l = \frac{h}{\cos \theta} = \frac{3}{\cos 60^\circ} = 6 \ cm$$

**20.** (c)

**22.** (d) If lift moves downward with some acceleration then effective g decreases, so h increases.

As 
$$h = \frac{2T\cos\theta}{rdg}$$
  $\therefore h \propto \frac{1}{g}$ 

**23.** (c)

**24.** (a) 
$$\frac{2T}{r} = hdg \Longrightarrow r = \frac{2T}{hdg}$$

**25.** (b) 
$$h \propto \frac{1}{r} \therefore r_1 h_1 = r_2 h_2 \Longrightarrow h_2 = \frac{r_1 h_1}{r_2} = 2.4 \ mm$$

29.

**27.** (a)  $h \propto \frac{1}{r}$  : rh = constant

**28.** (a) 
$$h = \frac{2T\cos\theta}{rdg} \therefore h \propto \frac{1}{g}$$

As 
$$g_m = \frac{g_e}{6}$$
  $\therefore$   $h_m = 6h_e$ 

(d) Ascent formula 
$$h = \frac{2T\cos\theta}{rdg}$$
  
 $\Rightarrow \frac{h_1}{h_2} = \frac{T_1}{T_2} \times \frac{d_2}{d_1}$  (*r*,  $\theta$  and *g* are constants)  
 $= \frac{60}{50} \times \frac{0.6}{0.8} = \frac{9}{10}$ 

**30.** (b) 
$$l = \frac{h}{\cos \theta} = \frac{2}{\cos 60^{\circ}} = 4.0 \ cm$$

**31.** (d) 
$$T = \frac{rhdg}{2\cos\theta}$$
. For pure water  $\theta = 0^{\circ}$  so  $T = \frac{rhdg}{2}$ 

**32.** (c) The length of the water column will be equal to full length of capillary tube.

33. (b) 
$$T = \frac{F}{2\pi r} = \frac{6.28 \times 10^{-4}}{2 \times 3.14 \times 2 \times 10^{-3}} = 5 \times 10^{-2} N/m$$

**34.** (a) 
$$h \propto \frac{1}{R}$$

35. (a) 
$$h = \frac{2T \cos \theta}{r dg}$$
, for water  $\theta = 0^{\circ}$   
 $\Rightarrow r = \frac{2T}{h dg} = \frac{2 \times 7.2 \times 10^{-2}}{3 \times 10^{-2} \times 10^{3} \times 10} = 4.8 \times 10^{-4}$   
 $\therefore d = 2r = 9.6 \times 10^{-4} m$ 

**36.** (c) 
$$h = \frac{2T}{rdg} \implies r = \frac{2T}{hdg} = \frac{2 \times 75 \times 10^{-3}}{15 \times 10^{-3} \times 10^{3} \times 10} = 1 mm$$
  
**37.** (d)  $h \propto \frac{1}{r}$ 

**38.** (a)

- **39.** (a)
- 40. (b) Mass of liquid in capillary tube

$$M = \pi R^2 H \times \rho \therefore M \propto R^2 \times \left(\frac{1}{R}\right) \text{ (As } H \propto 1/R)$$

 $\therefore \ \mbox{M} \varpropto R$  . If radius becomes double then mass will becomes twice.

**41.** (c) 
$$h \propto \frac{1}{r} \Rightarrow \frac{h_2}{h_1} = \frac{r_1}{r_2} = \frac{D_1}{D_2} = 2 \Rightarrow h_2 = 2h_1$$

# **Critical Thinking Questions**

1. (d) Suppose tension in thread is F, then for small part  $\Delta l$  of thread

$$\Rightarrow F = \frac{TR\theta}{\sin\theta/2} = \frac{TR\theta}{\theta/2} = 2TR(\sin\theta/2 \approx \theta/2)$$

**2.** (c) Rise in temperature, 
$$\Delta \theta = \frac{3T}{JSd} \left( \frac{1}{r} - \frac{1}{R} \right)$$

$$\therefore \Delta \theta = \frac{3T}{J} \left( \frac{1}{r} - \frac{1}{R} \right)$$
 (For water  $S = 1$  and  $d = 1$ )

**3.** (b,c) 
$$P_{Bottom} > P_{Surface}$$
. So bubble rises upward.

At constant temperature 
$$V \propto \frac{1}{P}$$
 (Boyle's law)

Since as the bubble rises upward, pressure decreases, then from above law volume of bubble will increase *i.e.* its size increases.

4. (d) In the satellite, the weight of the liquid column is zero. So the liquid will rise up to the top of the tube.

# **Graphical Questions**

(b) 
$$h = \frac{2T\cos\theta}{rdg}$$
 :  $h \propto \frac{1}{r}$ . So the graph between  $h$  and  $r$  will be rectangular hyperbola.

**2.** (a) 
$$\Delta P = \frac{4T}{r} \therefore \Delta P \propto \frac{1}{r}$$

1

As radius of soap bubble increases with time  $\therefore \Delta P \propto \frac{1}{t}$ 

**3.** (b)  $T_c = T_o(1 - \alpha t)$  *i.e.* surface tension decreases with increase in temperature.

# **Assertion and Reason**

 (c) When a liquid is sprayed, the surface area of the liquid increases. Therefore, work has to be done in spraying the liquid, which is directly proportional to the surface tension.

Because on adding soap, surface tension of water decreases, the spraying of water becomes easy.

2. (e) The soap solution, has less surface tension as compared to ordinary water and its surface tension decreases further on heating. The hot soap solution can, therefore spread over large surface area and also it has more wetting power. It is on account of this property that hot soap solution can penetrate and clean the clothes better than the ordinary water.

**3.** (a) 
$$h = \frac{2T}{Rdg} \Rightarrow hR = \frac{2T}{Rdg}$$
  $\therefore$   $hR = \text{constant}$ 

Hence when the tube is of insufficient length, radius of curvature of the liquid meniscus increases, so as to maintain the product hR a finite constant.

*i.e.* as *h* decreases, *R* increases and the liquid meniscus becomes more and more flat, but the liquid does not overflow.

 (c) Needle floats due to surface tension there is no role of buoyant force in its floating

Buoyant force =  $V\sigma g$ 

Where V = volume of body submerged in liquid

 $\sigma$  = density of liquid.

*i.e.* the buoyancy of an object depends on the shape of the object.

- 5. (c) The two glass plates stick together due to surface tension.
- 6. (e) The presence of impurities either on the liquid surface or dissolved in it, considerably affect the force of surface tension, depending upon the degree of contamination. A highly soluble substance like sodium chloride when dissolved in water increase the surface tension. But the sparing soluble or substance like phenol when dissolved in water reduces the surface tension of water.
- (c) With increase in temperature surface tension of the liquid decreases and angle of contact also decreases.
- 8. (b) We know that the intermolecular distance between the gas molecules is large as compared to that of liquid. Due to it the forces of cohesion in the gas molecules are very small and these are quite large for liquids. Therefore, the concept of surface tension is applicable to liquid but not to gases.
- **9.** (a) Zero surface tension means no opposition to expansion.
- 10. (a) Since the excess pressure due to surface tension is inversely proportional to its radius, it follows that smaller the bubble, greater is the excess pressure. Thus, when the larger and the smaller bubbles are put in communication, air starts passing from the smaller into the large bubble because excess pressure inside the former is greater than inside the latter. As a result, the smaller bubble shrinks and the larger one swells.
- (b) When a drop of liquid is poured on a glass plate, the shape of the drop is governed by two forces, the force of gravity. For very small drops, the potential energy due to gravity is

insignificant compared to that due to surface tension. Hence, in this case the shape of the drop is determined by surface tension alone and drop becomes spherical.

12. (a) The height of capillary rise is inversely proportional to radius

(or diameter) of capillary tube *i.e.*  $h \propto \frac{1}{r}$ 

So for smaller r the value of h is higher.

13. (c) With increase in temperature of liquid its surface tension decreases so that it tends to acquire larger area. Hence hot soup having low value of surface tension spread properly on our tongue & provides better taste than cold soup.

14. (b) The free surface of liquid tries to acquire a minimum area due to surface tension, hence liquid drop is spherical because sphere has minimum area than other shape.

**1.** A soap film of surface tension  $3 \times 10^{-2} Nm^{-1}$  formed in rectangular frame, can support a straw. The length of the film is 10 *cm*. Mass of the straw the film can support is

- (a) 0.06 gm (b) 0.6 gm
- (c) 6 *gm* (d) 60 *gm*
- 2. Energy required to form a soap bubble of diameter 20 *cm* will be (Surface tension for soap solution is 30 *dynes/cm*)
  - (a) 12000  $\pi$  ergs (b) 1200  $\pi$  ergs
  - (c) 2400  $\pi$  ergs (d) 24000  $\pi$  ergs
- If the work done in blowing a bubble of volume V is W, then the work done in blowing the bubble of volume 2V from the same soap solution will be [MP PET 1989]
  - (a) W/2 (b)  $\sqrt{2} W$
  - (c)  $\sqrt[3]{2} W$  (d)  $\sqrt[3]{4} W$
- **4.** Surface tension of soap solution is  $2 \times 10^{\circ} N/m$ . The work done in producing a soap bubble of radius 2 cm is
  - (a)  $64\pi \times 10^{-6} J$  (b)  $32\pi \times 10^{-6} J$ (c)  $16\pi \times 10^{-6} J$  (d)  $8\pi \times 10^{-6} J$
- Excess pressure inside a soap bubble is three times that of the other bubble, then the ratio of their volumes will be

(a) 1:3	(b)	1:	9
---------	-----	----	---

- $(c) \quad 1: \ 27 \qquad \qquad (d) \quad 1: 81 \\$
- **6.** When a capillary tube is dipped in water it rises upto 8 *cm* in the tube. What happens when the tube is pushed down such that its end is only 5 *cm* above the outside water level
  - (a) The radius of the meniscus increases and therefore water does not overflow
  - (b) The radius of the meniscus decreases and therefore water does not overflow
  - $(c) \;\;$  The water forms a droplet on top of the tube but does not overflow
  - (d) The water start overflowing
- A bubble of 8 mm diameter is formed in the air. The surface tension of soap solution is 30 *dynes/cm*. The excess pressure inside the bubble is [MP PET 1990]
  - (a) 150 *dynes/cm* (b) 300 *dynes/cm*
  - (c)  $3 \times 10^{\circ} dynes/cm$  (d) 12 dynes/cm
- 8. The height upto which water will rise in a capillary tube will be
  - (a) Maximum when water temperature is  $4^{\circ}C$
  - (b) Maximum when water temperature is  $0^{\circ}C$
  - (c) Minimum when water temperature is  $4^{\circ}C$

(a) Same at an temperatures

Water rises to a height of 10 *cm* in capillary tube and mercury falls to a depth of 3.112 *cm* in the same capillary tube. If the density of mercury is 13.6 and the angle of contact for mercury is 135°, the ratio of surface tension of water and mercury is

(a) 1:0.15 (b) 1:3

ET Self Evaluation Test -10

- (c) 1:6 (d) 1.5:1
- 10. The angle of contact between glass and water is 0 and it rises in a capillary upto 6 *cm* when its surface tension is 70 *dynes/cm*. Another liquid of surface tension 140 *dynes/cm*, angle of contact 60 and relative density 2 will rise in the same capillary by
  - (a) 12 *cm* (b) 24 *cm*
  - (c) 3 *cm* (d) 6 *cm*
  - A drop of water breaks into two droplets of equal size. In this process, which of the following statement is correct

[NCERT 1976]

- (a) The sum of temperature of the two droplets together is equal to the original temperature of the drop
- (b) The sum of masses of the two droplets is equal to the original mass of the drop
- (c) The sum of the radii of two droplets is equal to the radius of the original drop
- (d) The sum of the surface areas of the two droplets is equal to the surface area of the original drop
- **12.** A soap bubble of radius *R* is blown. After heating the solution a second bubble of radius 2*R* is blown. The work required to blow the second bubble in comparison to that required for the first bubble is
  - (a) Double
  - (b) Slightly less than double
  - (c) Slightly less than four times
  - (d) Slightly more than four times
- **13.** A false statement is
  - (a) Angle of contact  $\,\theta < 90^\circ$  , if cohesive force < adhesive force
  - (b) Angle of contact  $\theta > 90^\circ\!,$  , if cohesive force  $\!\!\!>$  adhesive force
  - (c) Angle of contact  $\theta = 90^\circ$ , if cohesive force = adhesive force
  - (d) If the radius of capillary is reduced to half, the rise of liquid column becomes four times
- 14. The diameter of rain-drop is 0.02 *cm*. If surface tension of water be  $72 \times 10^{-3}$  *newton* per *metre*, then the pressure difference of external and internal surfaces of the drop will be
  - (a)  $1.44 \times 10^4 \, dyne cm^{-2}$
  - (b)  $1.44 \times 10^4 newton m^{-2}$

11.

9.

- (c)  $1.44 \times 10^3 dyne cm^{-2}$
- (d)  $1.44 \times 10^5 newton m^{-2}$
- **15.** Water rises to a height of 16.3 *cm* in a capillary of height 18 *cm* above the water level. If the tube is cut at a height of 12 *cm*
- $(a) \quad \text{Water will come as a fountain from the capillary tube} \\$
- (b) Water will stay at a height of 12  $\,cm$  in the capillary tube
- (c) The height of the water in the capillary will be 10.3 *cm*

# Answers and Solutions

# (SET - 10)

**1.** (b) The weight of straw will be balanced by the force of surface 2Tl

tension 
$$\therefore mg = 2Tl \Rightarrow m = \frac{2Tr}{g}$$
$$= \frac{2 \times 3 \times 10^{-2} \times 10 \times 10^{-2}}{9.8} kg = 0.6gm$$

- 2. (d)  $E = 8\pi r^2 T = 8\pi (10)^2 \times 30 = 24000 \pi \ erg$
- **3.** (d) Work done to form a soap bubble

$$W = 8\pi R^2 T \qquad (\text{As } V \propto R^3 \therefore R \propto V^{1/3})$$

 $\therefore W \propto V^{2/3}$ 

$$\frac{W_2}{W_1} = \left(\frac{V_2}{V_1}\right)^{2/3} = (2)^{2/3} \implies W_2 = (4)^{1/3} W$$

4. (a) 
$$W = 8\pi R^2 T = 8 \times \pi \times (2 \times 10^{-2})^2 \times 2 \times 10^{-2} = 64\pi \times 10^{-6} J$$

5. (c) 
$$\Delta P \propto \frac{1}{r} \Rightarrow \frac{\Delta P_1}{\Delta P_2} = \frac{r_2}{r_1} \Rightarrow \frac{r_2}{r_1} = \frac{3}{1}$$
  
 $\therefore \frac{V_1}{V_2} = \left(\frac{r_1}{r_2}\right)^3 = \left(\frac{1}{3}\right)^3 = \frac{1}{27}$ 

6. (a) 
$$h = \frac{2T}{Rdg} \Rightarrow hR = \frac{2T}{dg} = \text{constant}$$

When *h* decreases, *R* increases.

7. (b) 
$$\Delta P = \frac{4T}{r} = \frac{4 \times 30}{0.4} = 300 \ dyne \ / \ cm^2$$
.

8. (c)  $h = \frac{2T\cos\theta}{rdg}$ . For water, density is maximum at  $4^{\circ}C$ , so

the height is minimum at  $4^{o}C$ .

9. (c) 
$$h = \frac{2T\cos\theta}{rdg}$$
 :  $T = \frac{hrdg}{2\cos\theta}$   
 $\Rightarrow \frac{T_1}{T_2} = \frac{h_1}{h_2} \times \frac{r_1}{r_2} \times \frac{d_1}{d_2} \times \frac{\cos\theta_2}{\cos\theta_1} = \frac{1}{6}$ 

10. (c) 
$$h = \frac{2T\cos\theta}{rdg} \therefore \frac{h_2}{h_1} = \frac{T_2}{T_1} \times \frac{\cos\theta_2}{\cos\theta_1} \times \frac{d_1}{d_2} \times \frac{r_1}{r_2}$$
$$\frac{h_2}{h_1} = \frac{140}{70} \times \frac{\cos 60^\circ}{\cos 0^\circ} \times \frac{1}{2} \times 1 = \frac{1}{2} \Longrightarrow h_2 = \frac{h_1}{2} = 3cm$$

**11.** (b)

**12.** (c) Work done to form a bubble of radius *R* 

$$W_1 = 8\pi R^2 T_1$$

Work done to form a bubble of radius 2R

$$W_2 = 8\pi (2R)^2 T_2 = 32\pi R^2 T_2 \quad \therefore \quad \frac{W_1}{W_2} = \frac{T_1}{4T_2}$$

If surface tension of soap solution is same then

 $W_2 = 4W_1$ 

But in the problem temperature of solution is increased so its surface tension decreases.

$$\therefore W_2 < 4W_1$$

13. (d) If radius of capillary is reduced to half, the rise of liquid column will be two times. as  $h \propto 1/r$ 

14. (a) 
$$\Delta P = \frac{2T}{r} = \frac{2 \times 72 \times 10^{-3}}{0.01 \times 10^{-2}} = 1440 \ N/m^2$$
  
= 1.44 × 10<sup>4</sup> dyne / cm<sup>2</sup>

**15.** (b) Because if the length available is less than required, then water will rise upto available height and adjust its radius of curvature.
