

**CLASS III ENGLISH WORKSHEET**  
**DATE OF SUBMISSION:**

**Read the passage and do the exercise given below**

**A Great Invention**

No cycles, no cars, no buses, no trains, not even aeroplanes? Yes, that is what the world would be like without wheels. How would you go to school if there were no wheels?

No one knows when the wheel was invented. But life must have been very difficult before it. Man must have carried loads himself or used animals. He must have used sledges to drag huge loads. Somebody must have seen a log rolling and got an idea. He must have found that it was easier and faster to move heavy objects by putting rounded sticks under the sledge. From this, the idea of the wheel must have come to him.

The first wheels must have been made by cutting logs into rounds. Then holes in the centre must have been made.

The wheel must have been invented many, many thousands of years ago. It made Man's life easy. He moved goods on carts. He could now move over longer distances with speed.

A. Fill in the blanks:

1. Life was ..... before the wheel was invented.
2. Man must have used sledges to carry huge .....
3. The first wheels must have been made by cutting .....into rounds.
4. The wheel might have been invented .....of years ago.

B. How has the invention of the wheel helped man?

.....  
.....  
.....
